# 1.0 Executive Summary

The following is a brief, non-technical summary of the findings and conclusions of the Limited Phase I Environmental Site Assessment (ESA). All users of this Limited Phase I ESA are advised to read the report in its entirety.

Ayres Associates Inc. (Ayres) has performed a Limited Phase I Environmental Site Assessment (ESA) in conformance with the scope and limitations of American Society for Testing and Materials (ASTM) Practice E1527-21 of 420 Central Avenue, Dolores, Colorado, the subject property. Any exceptions to or deviations from this practice are described in Section 2.7 of this report. This practice is intended to permit a Phase I ESA user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) liability, collectively referred to as "landowner liability protections" (LLPs): that is, the practice that constitutes "all appropriate inquiries" (AAI) into the previous ownership and uses of the property consistent with good commercial and customary practice as defined at 42 U.S.C. §9601(35)(B).

The primary objective of a Phase I ESA is to identify recognized environmental conditions (RECs), defined as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions, defined as conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies, are not RECs.

The following findings, conclusions, and opinions are based upon record reviews and interviews; no site reconnaissance was conducted during this assessment. All users of this Limited Phase I ESA are advised to read the report in its entirety.

## 1.1 Findings and Opinions

- The subject property, 420 Central Avenue, is the Town of Dolores' administrative building (Town Hall).
- The subject property consists of one parcel (Parcel ID# 5359-094-10-001) measuring approximately 1.56 acres in Montezuma County, Colorado. The parcel address is recorded as 420 Central Avenue.
- The Town Hall building is a single-story structure approximately 4,200 square feet in size. It is stick built on concrete slab. Walls consist of drywall and the roof is asphalt shingle. Exterior walls are brick and mortar. An asbestos survey was conducted inside the building and confirmed the presence of asbestos containing material (ACM). Additional asbestos assessment is scheduled prior to the demolition of the building. A separate structure is also located on the parcel. It is a railroad museum and is managed by the Galloping Goose Historical Society. The museum will remain in the park.
- The subject property was identified on one standard environmental record:
  - Records show a listing under "alternative fuels". The records indicate the use of an electric vehicle charging station. It was installed in 2021.
- Several sites in the surrounding area were identified on standard environmental records, but based on their locations, none are likely to have contamination that could migrate to the subject property. Five locations were identified with leaking USTs within ¼ mile of the subject property. The Colorado Department of Labor and Employment – Oil and Public Safety records indicate regulatory site closure was granted for all of them.

## 1.2 Conclusions

We have performed a Limited Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-21 for 420 Central Avenue, Dolores, CO, Montezuma County Parcel # 5359-094-10-001, the subject property. Any exceptions to or deletions from this practice are described in Section 2.7 of this report. This assessment has revealed the following recognized environmental conditions, controlled recognized environmental conditions, and/or significant data gaps in connection with the subject property.

### 1.2.1 Recognized Environmental Conditions

- None. Five locations were identified with leaking USTs within ¼ mile of the subject property. The Colorado Department of Labor and Employment – Oil and Public Safety records indicate regulatory site closure was granted for all of them.

### 1.2.2 Controlled Recognized Environmental Conditions

- None

### 1.2.3 Significant Data Gaps

- None

## 1.3 Additional Investigation

Based on the findings of this Limited Phase I ESA, it is the opinion of the environmental professional that no additional investigation is warranted at this time.

## 2.0 Introduction

### 2.1 Purpose

ASTM Practice E1527-21, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (hereafter referred to as ASTM), defines good commercial and customary practice in the United States of America for conducting a Phase I ESA of a parcel of commercial real estate with respect to the range of contaminants (e.g., hazardous substances) within the scope of the CERCLA (42 U.S.C. §9601) and petroleum products. This practice is intended to permit a Phase I ESA user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability, collectively referred to as "landowner liability protections": that is, the practice that constitutes "all appropriate inquiries" into the previous ownership and uses of the property consistent with good commercial and customary practice as defined at 42 U.S.C. §9601(35)(B).

The Phase I ESA process identifies the following types of RECs:

- Recognized Environmental Conditions: (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. *De minimis* conditions, defined as conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies, are not RECs.
- Controlled Recognized Environmental Condition: a recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, activity and use limitations or other property use limitations).
- Additionally, a Historical Recognized Environmental Condition is defined as a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meets unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations). A historical recognized environmental condition is not a REC.

### 2.2 Project Scope and Background

Ayres was retained to conduct a Phase I ESA of the site described in the table below, hereafter referred to as the "subject property."

<b>Parcel Address(es)</b>	420 Central Avenue Dolores, CO 80537
<b>Tax Parcel Identification Number(s)</b>	5359-094-10-001
<b>Parcel Legal Description(s)</b>	Subdivision: SOUTHERN Lot: 1-6 Block: 6 1.56AC

<b>Building Address(es)</b>	420 Central Avenue Dolores, CO 80537
<b>Public Land Survey System Location (if applicable)</b>	SE ¼ of SE ¼ of Section 9, T37N, Range 15W.

Refer to Appendix A for a Location Map (Figure 1) and Site Plan (Figure 2) depicting the subject property's location and the locations of features, activities, uses, and conditions indicative of RECs and *de minimis* conditions deemed pertinent by the environmental professional.

This Limited Phase I ESA is being conducted as part of a due diligence for prior to a building demolition for the Town of Dolores.

## 2.3 Non-Scope Considerations

The Phase I ESA process may identify "Business Environmental Risks," meaning risks which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated by ASTM. Consideration of Business Environmental Risk issues may involve addressing one or more non-scope considerations, including but not limited to asbestos-containing building materials, biological agents, cultural and historic resources, ecological resources, emerging contaminants not defined by ASTM as petroleum products or hazardous substances, endangered species, health and safety, indoor air quality unrelated to releases of hazardous substances or petroleum products into the environment, industrial hygiene, lead-based paint, lead in drinking water, mold, radon, regulatory compliance, and wetlands. Such considerations are excluded from the Phase I ESA report unless otherwise agreed upon by the Phase I ESA client and Ayres.

Considerations outside of the scope of ASTM were not included in Ayres' scope of work.

## 2.4 Special Terms and Conditions

Special terms and conditions were not agreed upon by the Phase I ESA client and Ayres.

## 2.5 Limitations

ASTM is itself limited in its capability to assess environmental conditions. The following are general limitations discussed in Sections 4 and 7 of ASTM:

1. No Phase I ESA can wholly eliminate uncertainty regarding the potential for RECs in connection with the subject property. It is limited by time and cost and is not an exhaustive assessment of a property. There is a point at which the cost of information obtained, or the time required to gather it, outweighs the usefulness of the information and may be a material detriment to the orderly completion of transactions. One of the purposes of ASTM is to identify a balance between competing goals of limiting the costs and time demands inherent in performing a Phase I ESA and the reduction of uncertainty about unknown conditions resulting from additional information.
2. The availability of record information varies from information source to information source, including governmental jurisdictions. The Phase I ESA user or environmental professional is not obligated to identify, obtain, or review every possible record that might exist for the subject property. The Phase I ESA user or environmental professional is required to review only record information that is reasonably ascertainable from those standard sources. Record information that is reasonably ascertainable means (1) information that is publicly available, (2) information that is

obtainable from its source within reasonable time and cost constraints, and (3) information that is practically reviewable.

3. The accuracy and completeness of record information reviewed for a Phase I ESA varies among information sources, including governmental sources. Record information is often inaccurate or incomplete. An environmental professional is not obligated to identify mistakes or insufficiencies in the information provided or required to verify independently the information provided but may rely on information provided unless he or she has actual knowledge that certain information is incorrect or unless it is obvious that certain information is incorrect based on other information obtained in the Phase I ESA or otherwise actually known to the environmental professional.
4. As outlined in Section 2.3 above, ASTM is limited in its scope and is not intended to identify any or all Business Environmental Risk issues which can have material environmental or environmentally-driven impacts on the business associated with the current or planned use of a parcel of commercial real estate.
5. A Phase I ESA is based upon conditions at the time of completion of the individual ESA elements and is presumed to be viable when it is conducted within 180 days before the date of acquisition of the subject property (or for transactions not involving an acquisition such as a lease or refinance, the date of the intended transaction).

## 2.6 Significant Assumptions

Significant assumptions of the environmental professional, if made, are presented in Section 10 of this report.

## 2.7 Deviations and Exceptions

This Phase I ESA did not include a site reconnaissance inspection. This deviates from ASTM.

## 2.8 Reliance

This report is intended for the sole use of the Town of Dolores. Ayres does not assume liability for the use of this report by unauthorized parties.

## 3.0 User-Provided Information

To qualify for LLPs offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments"), the Phase I ESA user must provide the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30 and 312.31. USEPA Brownfield Assessment and Characterization grantees must also conduct these inquiries. The Phase I ESA user should provide the following information to the environmental professional. Failure to provide this information could result in a determination that AAI is not complete.

A written User Questionnaire was submitted to a representative of the Town of Dolores on June 14, 2023. A copy of the User Questionnaire is provided in Appendix B. The following sections (3.1 to 3.6) summarize the responses communicated to Ayres by the Town of Dolores via the questionnaire or other communications.

### 3.1 Environmental Liens

The respondent was not aware of any environmental liens on the subject property.

### 3.2 Activity and Use Limitations

The respondent did not identify any Activity and Use Limitations (AULs) at the subject property.

### 3.3 Specialized Knowledge or Experience

The respondent did not indicate any additional knowledge or experience with the subject property.

### 3.4 Relationship of Purchase Price to Fair Market Value

The respondent indicated that the property is not on the market. The Town of Dolores will retain ownership of the property.

### 3.5 Commonly Known or Reasonably Ascertainable Information

The respondent has no knowledge of spills or chemical releases on property.

### 3.6 Obvious Indicators of Contamination

The respondent has no knowledge of the likelihood of contamination associated with past or current uses of the subject property.

## 4.0 Physical Setting

Physical setting resources provide information about a property's geologic, hydrogeologic, hydrologic, or topographic characteristics. The two standard physical setting sources are United States Geological Survey (USGS) 7.5-minute topographic maps and site-specific physical setting information obtained pursuant to agency file reviews pertaining to standard environmental records associated with the subject property and adjoining properties. One or more additional physical setting resources may be obtained at the discretion of the environmental professional and are sought when (1) conditions have been identified in which hazardous substances or petroleum products are likely to migrate to the subject property or from or within the subject property into the groundwater or soil and (2) more information than is provided in current USGS topographic maps is generally obtained, pursuant to local good commercial and customary practice in Phase I ESAs in the type of commercial real estate transaction involved, to assess the impact of such migration of RECs in connection with the subject property. Discretionary and non-standard physical setting resources include USGS and/or State Geological Survey groundwater maps, bedrock geology maps, and surficial geology maps; Natural Resources Conservation Service (NRCS) soil maps; or other reasonably credible and ascertainable resources.

Topographical information was obtained from USGS topographic maps. Figure A1 was generated referencing a 2019 USGS topographic map of Dolores, Colorado, and shows the property is approximately 6,932 feet above mean sea level (msl). Groundwater is expected to flow south-southwest towards the Dolores River and is approximately 6 to 10 feet below the ground surface. This information was obtained from various monitoring well permits. Additional topographic information is provided in Appendix E.

The subject property is relatively level, with a slight grade to the south-southeast. The soil on the subject property is comprised of the Dalmatian-Apway-Schrader Complex, fine clayey and sandy loam with 0 to 5 percent slopes (Appendix E). Soils in this group have moderately high runoff potential, and water transmission through the soil is somewhat restricted. According to USGS geology information, regional geologic conditions at or near the property are characterized by Phanerozoic, Mesozoic, and Jurassic age mudstone and sandstone of the Morrison, Wanakah, and Entrada Formations.

The subject property is not located within a designated wetland. The subject property lies within the Federal Emergency Management Agency (FEMA) designated flood hazard zone AO-01 (areas subject to inundation by the 1-percent-annual-chance flood event) (Appendix E). Approximately 49 wells (and additional sources) were identified within the 1-mile radius search (Appendix E). No wells were identified on-site; there are monitoring wells on adjoining properties. Some wells identified are/were groundwater monitoring wells, historical domestic water wells (now residents are supplied with municipal water), and irrigation. Six wells were identified as Public Water Supply and USGS Water Wells. No wells were identified as oil and gas pits or as oil or gas wells.

## 5.0 Historical Records Review

Historical resources are reviewed to develop a history of the previous uses of the subject property, adjoining properties, and surrounding area to help identify the likelihood of past uses having led to RECs in connection with the subject property. This objective includes identifying obvious property uses from the present back to the property's first developed use or 1940, whichever is earlier. The term "developed use" includes agricultural uses and placement of fill dirt. The historical research is complete when either the objectives described above are achieved or data failure is encountered. Standard historical resources reviewed for this Phase I ESA are described below and attached in Appendix D or otherwise incorporated by reference.

Historical Source	Reviewed (Yes/No)	Reason for Exclusion / Additional Notes
Aerial photographs	Yes	Aerial photos reviewed were dated from 1950 to 2021.
Fire insurance maps	Yes	Data from 1910, 1919, and 1939. In 1910, property had a band grandstand/park. 1919 and 1939, it was called "Depot Block" (adjacent to the narrow gauge railroad).
Local street directories	Yes	Listings were from 1998 through 2022.
USGS topographic maps	Yes	Topographic maps reviewed dated from 1965 to 2019. New bridge over the Dolores River and highway infrastructure occurred after 1965.
Building department records	No	A review of records would not provide additional information.
Interviews	No	Received User and Owner/Key Manager questionnaires.
Property tax files	Yes	Assessor's office
Zoning/land use records	Yes	Town of Dolores Planning Commission. Public (2) zoning
Prior Assessments (non-standard source)	No	Asbestos survey. Conditions for inside building known.

### 5.1 Subject Property

The subject property is the Town of Dolores – Town Hall. It is the administrative offices for the Town of Dolores and the landscaping surrounding the building is part of Flanders Park. Aerial photos show the administrative building present since 1950. Fire insurance map in 1939 do not show a building. According to Montezuma County Assessor's online records, the property is 1.56 acres. The Town Hall is a single story, stick built structure. On the same parcel in a separate building to the east, there is the Dolores Railroad Museum and Galloping Goose Historical Society.

## 5.2 Adjoining Properties

Properties to the west include a retail gasoline station and brewery. To the south across Railroad Avenue, there is a food market and apartments. Historically to the south was the railroad and depot station. Further south is residential properties. To the east, there is a retail gasoline station and various commercial and retail properties. To the north across Central Avenue, there is a vacant lot and various commercial and residential properties.

## 5.3 Surrounding Area

The surrounding area has a mix of commercial, light industrial and residential properties. The Town of Dolores is an agricultural and outdoor recreation based community. Historically, several coal and metal mines were active in the surrounding area.

## 5.4 Data Failure

Data failure occurs when all standard sources that are reasonably ascertainable and likely to be useful have been reviewed, and yet the objectives have not been met. Data failure is not uncommon in trying to identify the use of the subject property, adjoining properties, and surrounding area.

Data failure was encountered for the subject property. Limited information was available from the Montezuma County database online and the standard environmental records and did not include much detail prior to 1998. Historical aerial mapping and the fire insurance maps provided some detail into the use of the property prior to 1939.

## 6.0 Regulatory Records Review

Federal, state, and tribal standard environmental records are searched by a commercial service and reviewed by the environmental professional to identify recognized environmental conditions in connection with the subject property. Additional federal, state, tribal, and local environmental sources may be reviewed to enhance and supplement standard environmental record sources when, in the judgment of the environmental professional, such additional records are (1) reasonably ascertainable, (2) sufficiently useful, accurate and complete in light of the objective of the records review, and (3) generally obtained, pursuant to local good commercial and customary practice, in initial Phase I ESAs in the type of commercial real estate transaction involved. Potential sources for such records include but are not limited to the Department of Health/Environmental Division, Fire Department, Planning Department, Building Permit/Inspection Department, Local/Regional Pollution Control Agency, Local/Regional Water Quality Agency, and Local Electric Utility Companies. Previous Phase I or Phase II ESA reports provided by the user, property owner, or other parties are also reviewed in this section.

A copy of the standard environmental record search report compiled by a commercial service and copies of other environmental records deemed pertinent by the environmental professional are provided in Appendix C. Ayres makes a reasonable effort to compensate for inaccuracies or insufficiencies to the extent that the environmental professional has actual knowledge of identified sites.

The table below summarizes the findings of the standard environmental record search:

<b>Federal Sources (ASTM search radius in miles)</b>	<b>Subject Property (yes/no)</b>	<b>Adjoining Properties (# of sites)</b>	<b>Surrounding Area (# of sites)</b>
National Priority List (NPL/Superfund) (1.0)	No	0	0
Delisted NPL (0.5)	No	0	0
CERCLA removals and orders (0.5)	No	0	1
CERCLA sites with no further remedial action planned (NFRAP) (0.5)	No	0	0
Resource Conservation and Recovery Act (RCRA) facilities undergoing Corrective Action (1.0)	No	0	0
RCRA treatment, storage, and disposal (TSD) facilities (0.5)	No	0	0
RCRA generators (subject and adjoining properties only)	No	0	NA
Institutional control/engineering control registries (subject and adjoining properties only)	No	0	NA
Emergency Release Notification System (ERNS) list (subject property only)	No	NA	NA
<b>State and Tribal Sources</b>			
NPL equivalent (1.0)	No	0	0
Hazardous waste facilities (0.5)	No	0	0
Landfill and solid waste disposal facilities (0.5)	No	0	0
Leaking storage tanks (0.5)	No	3	2

Registered storage tanks (subject and adjoining properties only)	No	6	NA
Institutional control/engineering control registries (subject property only)	No	NA	NA
Voluntary cleanup sites (0.5)	No	0	0
Brownfield sites (0.5)	No	0	0

The table below identifies regulatory agency file reviews for the subject property and adjoining properties as well as justification for not conducting regulatory file reviews when not warranted in the opinion of the environmental professional.

<b>Property</b>	<b>Associated Standard Environmental Record(s)</b>	<b>Review of Pertinent File Records Conducted (Yes/No)</b>	<b>Date of File Request</b>	<b>Date of File Provision</b>	<b>Justification for Not Conducting File Review</b>
Subject Property  420 Central Avenue	Yes	Yes	N/A	9/6/23	Records indicate an alternative fuel source. There is and electric car recharging station present.
Adjoining Properties  501 Railroad Avenue  341 Railroad Avenue	Yes – Leaking USTs	Yes	9/7/23 online	9/7/23 online	N/A

## 6.1 Subject Property

The subject property, located at 420 Central Avenue, was identified on standard environmental records. There is an alternative fuels listing; the records show an electric vehicle charging station is located on the subject property.

## 6.2 Adjoining Properties

Adjoining properties were identified on standard environmental records. The retail gasoline stations located to the east and west of the subject property (501 Railroad Avenue and 341 Railroad Avenue) were listed as having leaking USTs. The Colorado Department of Labor and Employment – Oil and Public Safety (CDLE-OPS) records indicate the releases are closed (resolved) and inactive.

### 6.3 Surrounding Area

None of the additional sites listed in the surrounding area are likely to have current or former releases of hazardous substances or petroleum products with the potential to migrate to the subject property. A total of five LST sites were identified within a ¼ mile of the subject property. All locations have been closed by the CDLE-OPS.

The standard environmental records identified one CERCLA site in the surrounding area. Review of the records listed McPhee Reservoir as the location being assessed. At one time, elevated mercury levels above 0.5 parts per million (PPM) were found in fish caught from the reservoir. Although a specific source has not been identified, the elevated levels of mercury are attributed to the 200+ historic coal and metals mines (runoff) in the area.

## 7.0 Site Reconnaissance

A site reconnaissance is conducted to obtain information indicating the likelihood of identifying RECs in connection with the subject property. The subject property and any structures are visually or physically observed where and when possible. Observation of the interior of structures, as required by ASTM, includes accessible common areas expected to be used by occupants or the public (such as lobbies, hallways, utility rooms, recreation areas, etc.), maintenance and repair areas, including boiler rooms, and a representative sample of occupant spaces. ASTM does not require observation under floors, above ceilings, or behind walls. Limiting conditions, including those posed by physical obstructions such as adjacent buildings, bodies of water, asphalt, or other paved areas or other physical constraints such as snow or rain, are documented in the report. The key site manager is requested to be present during the site reconnaissance to facilitate the gathering of information, although ASTM does not strictly require their presence. It is not expected that more than one site visit be made to constitute the site reconnaissance for a Phase I ESA. Photographs pertinent to the key findings of the site reconnaissance are provided in Appendix E.

**As part of this scope of work, no site reconnaissance was performed. This assessment is limited to a desktop review.**

### 7.1 Methods and Limiting Conditions

The table below describes the methods and limiting conditions of the site reconnaissance. Additionally, questions about helpful documents, such as previous environmental reports and environmental permits, are asked to the subject property owner, key site manager, and Phase I ESA user via a written Owner/Key Site Manager Questionnaire or User Questionnaire. If available, Ayres reviews such documents before or at the beginning of the site visit to facilitate an understanding of subject property operations and identification of RECs in connection with the subject property.

<b>Date of Site Visit</b>	N/A
<b>Ayres Field Staff</b>	N/A
<b>Accompanying Persons</b>	N/A
<b>Method</b>	N/A
<b>Limiting Conditions</b>	Desktop Review

### 7.2 Current Use of the Subject Property

The subject property is the Town Hall for Dolores, Colorado. It provides the administrative services for the Town of Dolores. There is also a railroad museum on the parcel which is managed by the Galloping Goose Historical Society.

### 7.3 Past Use of the Subject Property

The subject property has been a local jail. Prior to 1950, it was associated with the railroad depot. Fire insurance maps show a “band grandstand” and park in 1910. In 1919 and 1939, the maps show the subject property as “Depot Block” and was used to access the railroad.

## 7.4 Current Uses of Adjoining Properties

To the west and east, there are active retail gasoline stations.

To the south (across Railroad Avenue) there is a food marketplace and a single-story apartment complex.

To the north, there is a vacant lot and some small commercial properties.

## 7.5 Past Uses of Adjoining Properties

The retail gasoline stations have been present since the late 1970s. Various commercial and retail businesses have surrounded the subject property. To the south, the railroad (Rio Grande Southern Railway) existed from the 1890s to 1953. After 1953, most of the rails through town were either removed or buried. Repurposing of some of the depot buildings (small apartments), a food marketplace, and other residential properties emerged.

## 7.6 Current or Past Uses in the Surrounding Area

The surrounding properties supported the agricultural and mining activities throughout the years. Various feed and coop stores, lumber companies and small hotels existed in the area. Current businesses continue to support the agricultural and expanding outdoor recreation economy in the area. McPhee Reservoir Dam was completed in 1985 and filled the lower Dolores River Valley. It provides electricity and serves as a water resource for Montezuma and Dolores Counties and the Ute Indian Reservation. Located in the San Juan national Forest, McPhee Reservoir also hosts various outdoor recreational activities.

## 7.7 Geologic, Hydrogeologic, Hydrologic, and Topographical Conditions

The subject property and the surrounding area is located along the Dolores River upstream from McPhee Reservoir. Refer to Section 4 for additional physical setting information.

## 7.8 Structures and Other Improvements at the Subject Property

The Town Hall building is a single-story structure approximately 4,200 square feet in size. It is stick built on concrete slab. Walls consist of drywall and the roof is asphalt shingle. Exterior walls are brick and mortar. A separate structure is also located on the parcel. It is a railroad museum and is managed by the Galloping Goose Historical Society.

## 7.9 Roads

The subject property is located between 4<sup>th</sup> Street (west) and 5<sup>th</sup> Street (east) on Central Avenue. Railroad Avenue (CO Hwy 145) is adjacent to the south and is the major thoroughfare through town.

## 7.10 Potable Water Supply/Source

The subject property is on a municipal water supply.

## 7.11 Sewage Disposal System

The subject property is on a municipal sewer system.

## 7.12 Hazardous Substances and Petroleum Products in Connection with Identified Uses

Unknown. No site reconnaissance was performed.

## 7.13 Storage Tanks

Unknown. No site reconnaissance was performed. Standard environmental records do not indicate the past or current presence of storage tanks.

## 7.14 Strong, Pungent, or Noxious Odors and Their Sources

Unknown. No site reconnaissance was performed.

## 7.15 Standing Surface Water and Pools or Sumps Containing Liquids Likely to be Hazardous Substances or Petroleum Products

Unknown. No site reconnaissance was performed.

## 7.16 Drums, Totes, and Intermediate Bulk Containers

Unknown. No site reconnaissance was performed.

## 7.17 Hazardous Substance and Petroleum Product Containers Not in Connection with Identified Uses

Unknown. No site reconnaissance was performed.

## 7.18 Unidentified Substance Containers

Unknown. No site reconnaissance was performed.

## 7.19 PCB-Containing Items

Unknown. No site reconnaissance was performed.

## 7.20 Heating/Cooling

Unknown. No site reconnaissance was performed.

## 7.21 Stains or Corrosion on Floors, Walls, or Ceilings

Unknown. No site reconnaissance was performed.

## 7.22 Drains and Sumps

Unknown. No site reconnaissance was performed.

### 7.23 Pits, Ponds, or Lagoons

From reports and records review, there are no pits, ponds, or lagoons present.

### 7.24 Stained Soil or Pavement

Unknown. No site reconnaissance was performed.

### 7.25 Stressed Vegetation

Unknown. No site reconnaissance was performed.

### 7.26 Solid Waste

Unknown. No site reconnaissance was performed.

### 7.27 Water/Wastewater

Unknown. No site reconnaissance was performed.

### 7.28 Wells

From reports and records review, there are no pits, ponds, or lagoons present.

### 7.29 Septic Systems or Cesspools

From reports and records review, there are no pits, ponds, or lagoons present.

## 8.0 Interviews

### 8.1 Past and Present Owners and Occupants

The current subject property owner is, at a minimum, asked to identify a key site manager with good knowledge of the uses and physical characteristics of the subject property. A reasonable attempt is made to interview the key site manager (who may or may not also be the subject property owner or Phase I ESA user) and occupants of the subject property. Interviews with past owners, operators, and occupants who are likely to have material information regarding the potential for contamination at the subject property are conducted to the extent that they have been identified, and that information likely to be obtained is not duplicative of information already obtained from other sources.

Paul Ruud (Town Manager) of the Town of Dolores, CO, was interviewed via a questionnaire, which were returned on September 18, 2023. Mr. Ruud indicated that he was unaware of any releases of petroleum products or hazardous substances affecting the subject property.

### 8.2 State and Local Government Officials

A reasonable attempt is made to interview at least one staff member of any one of the following types of state and/or local government agencies: (1) local fire department that serves the subject property, (2) state and/or local health agency or local/regional office of state health agency servicing the subject property, (3) state and/or local agency or local/regional office of state agency having jurisdiction over hazardous waste disposal or other environmental matters for the subject property, and (4) local agencies responsible for the issuance of building permits or groundwater use permits that document the presence of AULs which may identify a REC for the subject property.

A records request via phone call and email to the Dolores Fire & Rescue for fire and environmental calls was made on September 7, 2023. Dolores Fire & Rescue did not respond to the records request.

### 8.3 Others

Other persons not described above may be interviewed if they are likely to provide information useful for completing the objectives of the Phase I ESA. In the case of inquiries conducted at abandoned properties where there is evidence of potential unauthorized uses of the abandoned property or evidence of uncontrolled access to the abandoned property, interviews with one or more owners or occupants of neighboring or nearby properties will be conducted.

Others were not interviewed during the assessment.

## 9.0 Non-Scope Services

This section presents information and findings for additional services outside the scope of ASTM.

Additional services outside of the scope of ASTM E1527-21 were not requested by the client.

## 10.0 Evaluation

### 10.1 Findings and Opinions

- The subject property, 420 Central Avenue, is the Town of Dolores' administrative building (Town Hall).
- The subject property consists of one parcel (Parcel ID# 5359-094-10-001) measuring approximately 1.56 acres in Montezuma County, Colorado. The parcel address is recorded as 420 Central Avenue.
- The Town Hall building is a single-story structure approximately 4,200 square feet in size. It is stick built on concrete slab. Walls consist of drywall and the roof is asphalt shingle. Exterior walls are brick and mortar. An asbestos survey was conducted inside the building and confirmed the presence of asbestos containing material (ACM). Additional asbestos assessment is scheduled prior to the demolition of the building. A separate structure is also located on the parcel. It is a railroad museum and is managed by the Galloping Goose Historical Society. The museum will remain in the park.
- The subject property was identified on one standard environmental record:
  - Records show a listing under "alternative fuels". The records indicate the use of an electric vehicle charging station. It was installed in 2021.
- Several sites in the surrounding area were identified on standard environmental records, but based on their locations, none are likely to have contamination that could migrate to the subject property. Five locations were identified with leaking USTs within ¼ mile of the subject property. The Colorado Department of Labor and Employment – Oil and Public Safety records indicate regulatory site closure was granted for all of them.

### 10.2 Conclusions

We have performed a Limited Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-21 of 420 Central Avenue, Dolores, CO., the subject property. Any exceptions to or deletions from this practice are described in Section 2.7 of this report. This assessment has revealed the following recognized environmental conditions, controlled recognized environmental conditions, and/or significant data gaps in connection with the subject property.

#### 10.2.1 Recognized Environmental Conditions

- None. Five locations were identified with leaking USTs within ¼ mile of the subject property. The Colorado Department of Labor and Employment – Oil and Public Safety records indicate regulatory site closure was granted for all of them.

#### 10.2.2 Controlled Recognized Environmental Conditions

- None

### 10.2.3 Significant Data Gaps

- None

## 10.3 Additional Investigation

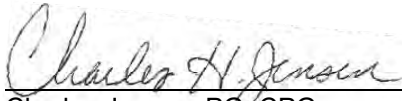

This section includes the environmental professional's opinion regarding additional appropriate investigation, if any, to detect the presence of hazardous substances or petroleum products at the subject property. An opinion that additional investigation is appropriate does not render the assessment incomplete and is provided when greater certainty of a REC is required for compliance with AAI. Greater certainty is usually required when a REC is identified due to a likely release rather than a confirmed or obvious release of hazardous substances or petroleum products. The environmental professional may also determine that additional investigation is appropriate when data gaps or other conditions significantly limited the assessment. Additional investigation may involve sampling and chemical analysis of environmental media or other assessment activities. Additionally, the inclusion of such an opinion does not constitute a recommendation for the Phase I ESA client or other authorized users. Recommendations are outside of the scope of ASTM and are dependent on the Phase I ESA client's or other authorized user's specific objectives, time and budget constraints, and risk tolerance.

Based on the findings of this Limited Phase I ESA, it is the opinion of the environmental professional that no additional investigation is warranted at this time.

## 11.0 Environmental Professional Statement

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in § 312.10 of 40 CFR § 312.

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

  
Charles Jensen, PG, CPG

September 18, 2023  
Date

Resumes of the environmental professional(s), as well as those of any additional staff that conducted the site reconnaissance or interviews, are provided in Appendix E.

**User Questionnaire**

## ASTM Practice E1527-21: Phase I Environmental Site Assessment Owner/Key Site Manager Questionnaire

This questionnaire is intended to assist the environmental professional in identifying recognized environmental conditions in connection with the property. Please answer in good faith and to the extent of your knowledge, being as specific as reasonably feasible and using additional sheets if necessary. Note that this questionnaire is not intended to be comprehensive, and additional questions may be asked in person, by telephone, or in writing, at the discretion of the environmental professional, before, during, or after the site visit.

**1. Please check the appropriate box(es) to describe your relationship to the property:**

☒ I am the owner or authorized representative of the owner of the property (if selected, check one of the two boxes below)

☒ I am also the key site manager

☐ I have designated someone else as the key site manager (This person should have good knowledge of the uses and physical characteristics of the property. If selected, please write the key site manager's name and contact information.)

Name: Paul Reed, Town Manager, Dolores  
Telephone: 970 882 7720 (O), 970 317 3586 (C)  
Email: Paul@TownofDolores.com

☐ I am the key site manager only

**2. How many years of experience do you have in connection with the property?**

Zero; I have recently taken the Manager position in Dolores,

**3. Please check the appropriate box to describe the property's potable water supply:**

☐ The property has no potable water supply

☐ The property uses a private or on-site potable water supply

☒ The property uses a municipal potable water supply

**4. Please check the appropriate box to describe the property's sewage disposal system and describe the age of the system, if applicable:**

☐ The property has no sewage disposal system

☐ The property uses a private or on-site sewage disposal system

The age of this system is:

☒ The property uses a municipal sewage disposal system

The age of this system is:

5. Please describe the current use(s) of the property, in general and as it pertains the use of petroleum products and/or hazardous substances.

Municipal office; there are no use of petroleum products or Hazardous substance.

6. Please describe the past use(s) of the property, in general and as it pertains the use of petroleum products and/or hazardous substances.

No change.

- a. If known, please provide the name and contact information for the past owner and/or operator of the property.

None.

7. Are you aware of any releases or suspected releases of petroleum products or hazardous substances to the environment at the property (keep in mind that releases not originating at the property may migrate to the property from off-site sources)? If so, please describe.

No.

8. Please indicate whether any of the following documents exist for the property, and if so, whether copies can and will be provided to the environmental professional within reasonable time and cost constraints:

- ☐ Environmental site assessment reports
- ☐ Environmental compliance audit reports
- ☐ Environmental permits (for example, solid waste disposal permits, hazardous waste disposal permits, wastewater permits, NPDES (stormwater) permits, underground injection permits)
- ☐ Registrations for underground and aboveground storage tanks
- ☐ Safety data sheets
- ☐ Community right-to-know plan

- ☐ Safety plans; preparedness and prevention plans; spill prevention, control and countermeasure plans, facility response plans, etc.
- ☐ Reports regarding hydrogeologic conditions on the property or surrounding area
- ☐ Notices or other correspondence from any government agency relating to past or current violations of environmental laws with respect to the property or relating to environmental liens encumbering the property
- ☐ Hazardous waste generator notices or reports
- ☐ Geotechnical studies
- ☐ Risk assessments
- ☐ Recorded AULs

9. Do you know of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property? If so, please describe.

No.

10. Do you know of any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the property? If so, please describe.

No.

11. Do you know of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products? If so, please describe.

No.

# ASTM Practice E1527-21: Phase I Environmental Site Assessment User Questionnaire

## Part 1 – User’s Responsibilities

In order to qualify for one of the *Landowner Liability Protections (LLPs)*<sup>1</sup> offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the “*Brownfields Amendments*”)<sup>2</sup>, the *user* must provide the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30 and 312.31. These inquiries must also be conducted by EPA Brownfield Assessment and Characterization grantees. The *user* should provide the following information to the *environmental professional*. Failure to provide this information could result in a determination that “*all appropriate inquiries*” is not complete.

(1) **Environmental liens that are filed or recorded against the *property* (40 CFR 312.25).**

Did a search of *recorded land title records* (or judicial records where appropriate<sup>3</sup>) identify any environmental liens filed or recorded against the *property* under federal, tribal, state or local law?

None.

(2) **Activity and land use limitations (AULs) that are in place on the *property* or that have been filed or recorded against the *property* (40 CFR 312.26(a)(1)(v) and (vi)).**

Did a search of *recorded land title records* (or judicial records where appropriate<sup>3</sup>) identify any AULs, such as *engineering controls*, land use restrictions or *institutional controls* that are in place at the *property* and/or have been filed or recorded against the *property* under federal, tribal, state or local law?

None.

(3) **Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).**

Do you have any specialized knowledge or experience related to the *property* or nearby properties? For example, are you involved in the same line of business as the current or former *occupants* of the *property* or an *adjoining property* so that you would have specialized knowledge of the chemicals and processes used by this type of business?

No.

---

<sup>1</sup> *Landowner Liability Protections, Protections, or LLPs*, is the term used to describe the three types of potential defenses to Superfund liability in EPA's *Interim Guidance Regarding Criteria Landowners Must Meet in Order to Qualify for Bona Fide Prospective Purchaser, Contiguous Property Owner, or Innocent Landowner Limitations on CERCLA Liability* (“*Common Elements*” Guide) issued on March 6, 2003.

<sup>2</sup> Public Law 107-118.

<sup>3</sup> In certain jurisdictions, federal, tribal, state, or local statutes, or regulations specify that environmental liens and AULs be filed in judicial records rather than in land title records. In such cases judicial records must be searched for environmental liens and AULs.

- (4) **Relationship of the purchase price to the fair market value of the *property* if it were not contaminated (40 CFR 312.29).**

Does the purchase price being paid for this *property* reasonably reflect the fair market value of the *property*? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the *property*?

*Property is not for sale.*

- (5) **Commonly known or *reasonably ascertainable* information about the *property* (40 CFR 312.30).**

Are you aware of commonly known or *reasonably ascertainable* information about the *property* that would help the *environmental professional* to identify conditions indicative of releases or threatened releases? For example,

a). Do you know the past uses of the *property*?

*Yes.*

b). Do you know the specific chemicals that are present or once were present at the *property*?

*None.*

c). Do you know of spills or other chemical releases that have taken place at the *property*?

*None.*

d). Do you know of any environmental cleanups that have taken place at the *property*?

*None.*

- (6) **The degree of obviousness of the presence or likely presence of contamination at the *property*, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).**

Based on your knowledge and experience related to the *property* are there any *obvious* indicators that point to the presence or likely presence of contamination at the *property*?

*No.*

## Part 2 – Additional Information

In addition, certain information should be collected, if available, and provided to the *environmental professional* selected to conduct the *Phase I Environmental Site Assessment*. This information is intended to assist the *environmental professional* but is not necessarily required to qualify for one of the LLPs. The information includes:

- (1) Reason why the Phase I ESA is being performed:

*Due diligence for building demolition.*

- (2) Type of *property* and type of *property* transaction (for example, sale, purchase, exchange, etc.):

*Property will remain with the Town of Dolores.*

- (3) Complete and correct address for the *property* (a map or other documentation showing *property* location and boundaries is helpful):

*Town of Dolores, 420 Central Ave, PO Box 630, Dolores, 81323.*

- (4) Scope of services desired for the Phase I ESA (including whether any parties to the *property* transaction may have a required standard scope of services on whether any considerations beyond the requirements of ASTM Practice E1527-13 are to be considered):

*Due diligence for demolition.*

- (5) Identification of all parties who will rely on the Phase I ESA report:

*Town of Dolores and its representative.*

- (6) Identification of the site contact and how the contact can be reached:

*Paul Reed - Town Manager*

- (7) Any special terms and conditions which must be agreed upon by the *environmental professional*:

*No.*

- (8) Any other knowledge or experience with the *property* that may be pertinent to the *environmental professional*:

- a. Please indicate whether any of the following documents exist for the *property*, and if so, whether copies can and will be provided to the *environmental professional* within reasonable time and cost constraints:

- ☐ Environmental site assessment reports
- ☐ Environmental compliance audit reports
- ☐ Environmental permits (for example, solid waste disposal permits, hazardous waste disposal permits, wastewater permits, NPDES (stormwater) permits, underground injection permits)
- ☐ Registrations for underground and aboveground storage tanks
- ☐ Safety data sheets
- ☐ Community right-to-know plan

- ☐ Safety plans; preparedness and prevention plans; spill prevention, control and countermeasure plans, facility response plans, etc.
- ☐ Reports regarding hydrogeologic conditions on the property or surrounding area
- ☐ Notices or other correspondence from any government agency relating to past or current violations of environmental laws with respect to the property or relating to environmental liens encumbering the property
- ☐ Hazardous waste generator notices or reports
- ☐ Geotechnical studies
- ☐ Risk assessments
- ☐ Recorded AULs

b. Do you know of any pending, threatened, or past litigation relevant to *hazardous substances* or *petroleum products* in, on, or from the *property*? If so, please describe.

No.

c. Do you know of any pending, threatened, or past administrative proceedings relevant to *hazardous substances* or *petroleum products* in, on or from the *property*? If so, please describe.

No.

d. Do you know of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to *hazardous substances* or *petroleum products*? If so, please describe.

No.

**Additional Comments:**

**Comments:**

**Cause Info:**

The caller stated that the driver fell asleep at the wheel while driving an empty semi-truck and ran off the road, rupturing the saddle tank and releasing about 60 gallons of diesel.

**Action:**

CSP plugged the tank and had the remaining fuel pumped off. The contractor, Envirotec, dammed and diked the area. No waterways were impacted. Envirotec to complete cleanup.

## Appendix: Database Descriptions

*Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13 and E1527-21, Section 8.1.8 Sources of Standard Source Information:*

*"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."*

### Standard Environmental Record Sources

#### Federal

##### National Priority List:

NPL

Sites on the United States Environmental Protection Agency (EPA)'s National Priorities List of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. The NPL, which EPA is required to update at least once a year, is based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

**Government Publication Date: May 25, 2023**

##### National Priority List - Proposed:

PROPOSED NPL

Sites proposed by the United States Environmental Protection Agency (EPA), the state agency, or concerned citizens for addition to the National Priorities List (NPL) due to contamination by hazardous waste and identified by the EPA as a candidate for cleanup because it poses a risk to human health and/or the environment. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

**Government Publication Date: May 25, 2023**

##### Deleted NPL:

DELETED NPL

Sites deleted from the United States Environmental Protection Agency (EPA)'s National Priorities List. The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425(e), sites may be deleted from the NPL where no further response is appropriate. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

**Government Publication Date: May 25, 2023**

##### SEMS List 8R Active Site Inventory:

SEMS

The U.S. Environmental Protection Agency's (EPA) Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted. This data includes SEMS sites from the List 8R Active file as well as applicable sites from the SEMS GIS/REST file layer obtained from EPA's Facility Registry Service.

**Government Publication Date: Jul 26, 2023**

**SEMS List 8R Archive Sites:**[SEMS ARCHIVE](#)

The U.S. Environmental Protection Agency's (EPA) Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. This data includes sites from the List 8R Archived site file.

**Government Publication Date: Jul 26, 2023**

**Inventory of Open Dumps, June 1985:**[ODI](#)

The Resource Conservation and Recovery Act (RCRA) provides for publication of an inventory of open dumps. The Act defines "open dumps" as facilities which do not comply with EPA's "Criteria for Classification of Solid Waste Disposal Facilities and Practices" (40 CFR 257).

**Government Publication Date: Jun 1985**

**Comprehensive Environmental Response, Compensation and Liability Information System - CERCLIS:**[CERCLIS](#)

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

**Government Publication Date: Oct 25, 2013**

**EPA Report on the Status of Open Dumps on Indian Lands:**[IODI](#)

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

**Government Publication Date: Dec 31, 1998**

**CERCLIS - No Further Remedial Action Planned:**[CERCLIS NFRAP](#)

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

**Government Publication Date: Oct 25, 2013**

**CERCLIS Liens:**[CERCLIS LIENS](#)

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA). This database was provided by the United States Environmental Protection Agency (EPA). Refer to SEMS LIEN as the current data source for Superfund Liens.

**Government Publication Date: Jan 30, 2014**

**RCRA CORRACTS-Corrective Action:**[RCRA CORRACTS](#)

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. At these sites, the Corrective Action Program ensures that cleanups occur. EPA and state regulators work with facilities and communities to design remedies based on the contamination, geology, and anticipated use unique to each site.

**Government Publication Date: Jul 10, 2023**

**RCRA non-CORRACTS TSD Facilities:**[RCRA TSD](#)

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. This database includes Non-Corrective Action sites listed as treatment, storage and/or disposal facilities of hazardous waste as defined by RCRA.

**Government Publication Date: Jul 10, 2023**

**RCRA Generator List:**[RCRA LQG](#)

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Large Quantity Generators (LQGs) generate 1,000 kilograms per month or more of hazardous waste or more than one kilogram per month of acutely hazardous waste.

**Government Publication Date: Jul 10, 2023**

**RCRA Small Quantity Generators List:**[RCRA SQG](#)

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Small Quantity Generators (SQGs) generate more than 100 kilograms, but less than 1,000 kilograms, of hazardous waste per month.

**Government Publication Date: Jul 10, 2023**

**RCRA Very Small Quantity Generators List:**[RCRA VSQG](#)

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Very Small Quantity Generators (VSQG) generate 100 kilograms or less per month of hazardous waste, or one kilogram or less per month of acutely hazardous waste. Additionally, VSQG may not accumulate more than 1,000 kilograms of hazardous waste at any time.

**Government Publication Date: Jul 10, 2023**

**RCRA Non-Generators:**[RCRA NON GEN](#)

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Non-Generators do not presently generate hazardous waste.

**Government Publication Date: Jul 10, 2023**

**RCRA Sites with Controls:**[RCRA CONTROLS](#)

List of Resource Conservation and Recovery Act (RCRA) facilities with institutional controls in place. RCRA gives the U.S. Environmental Protection Agency (EPA) the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances.

**Government Publication Date: Jul 10, 2023**

**Federal Engineering Controls-ECs:**[FED ENG](#)

This list of Engineering controls (ECs) is provided by the United States Environmental Protection Agency (EPA). ECs encompass a variety of engineered and constructed physical barriers (e.g., soil capping, sub-surface venting systems, mitigation barriers, fences) to contain and/or prevent exposure to contamination on a property. The EC listing includes remedy component data from Superfund decision documents issued in fiscal years 1982-2021 for applicable sites on the final or deleted on the National Priorities List (NPL); and sites with a Superfund Alternative Approach (SAA) Agreement in place. The only sites included that are not on the NPL; proposed for NPL; or removed from proposed NPL, are those with an SAA Agreement in place.

**Government Publication Date: Jun 22, 2023**

**Federal Institutional Controls- ICs:**[FED INST](#)

This list of Institutional controls (ICs) is provided by the United States Environmental Protection Agency (EPA). ICs are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site. The IC listing includes remedy component data from Superfund decision documents issued in fiscal years 1982-2021 for applicable sites on the final or deleted on the National Priorities List (NPL); and sites with a Superfund Alternative Approach (SAA) Agreement in place. The only sites included that are not on the NPL; proposed for NPL; or removed from proposed NPL, are those with an SAA Agreement in place.

**Government Publication Date: Jun 22, 2023**

**Land Use Control Information System:**

LUCIS

The LUCIS database is maintained by the U.S. Department of the Navy and contains information for former Base Realignment and Closure (BRAC) properties across the United States.

**Government Publication Date:** Sep 1, 2006

**Institutional Control Boundaries at NPL sites:**

NPL IC

Boundaries of Institutional Control areas at sites on the United States Environmental Protection Agency (EPA)'s National Priorities List, or Proposed or Deleted, made available by the EPA's Shared Enterprise Geodata and Services (SEGS). United States Environmental Protection Agency (EPA)'s National Priorities List of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. Institutional controls are non-engineered instruments such as administrative and legal controls that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy.

**Government Publication Date:** May 25, 2023

**Emergency Response Notification System:**

ERNS 1982 TO 1986

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

**Government Publication Date:** 1982-1986

**Emergency Response Notification System:**

ERNS 1987 TO 1989

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

**Government Publication Date:** 1987-1989

**Emergency Response Notification System:**

ERNS

Database of oil and hazardous substances spill reports made available by the United States Coast Guard National Response Center (NRC). The NRC fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. These data contain initial incident data that has not been validated or investigated by a federal/state response agency.

**Government Publication Date:** Apr 3, 2023

**The Assessment, Cleanup and Redevelopment Exchange System (ACRES) Brownfield Database:**

FED BROWNFIELDS

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties protects the environment, reduces blight, and takes development pressures off greenspaces and working lands. This data is provided by the United States Environmental Protection Agency (EPA) and includes Brownfield sites from the Cleanups in My Community (CIMC) web application.

**Government Publication Date:** Sep 13, 2022

**FEMA Underground Storage Tank Listing:**

FEMA UST

The Federal Emergency Management Agency (FEMA) of the Department of Homeland Security maintains a list of FEMA owned underground storage tanks.

**Government Publication Date:** Dec 31, 2017

**Facility Response Plan:**

FRP

This listing contains facilities that have submitted Facility Response Plans (FRPs) to the U.S. Environmental Protection Agency (EPA). Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit FRPs. Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments. This listing includes FRP facilities from an applicable EPA FOIA file and Homeland Infrastructure Foundation-Level Data (HIFLD) data file.

**Government Publication Date:** May 2, 2023

**Delisted Facility Response Plans:**

DELISTED FRP

Facilities that once appeared in - and have since been removed from - the list of facilities that have submitted Facility Response Plans (FRP) to EPA. Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit Facility Response Plans (FRPs). Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments.

**Government Publication Date:** May 2, 2023

**Historical Gas Stations:**[HIST GAS STATIONS](#)

This historic directory of service stations is provided by the Cities Service Company. The directory includes Cities Service filling stations that were located throughout the United States in 1930.

**Government Publication Date:** Jul 1, 1930

**Petroleum Refineries:**[REFN](#)

List of petroleum refineries from the U.S. Energy Information Administration (EIA) Refinery Capacity Report. Includes operating and idle petroleum refineries (including new refineries under construction) and refineries shut down during the previous year located in the 50 States, the District of Columbia, Puerto Rico, the Virgin Islands, Guam, and other U.S. possessions. Survey locations adjusted using public data.

**Government Publication Date:** Aug 30, 2022

**Petroleum Product and Crude Oil Rail Terminals:**[BULK TERMINAL](#)

List of petroleum product and crude oil rail terminals made available by the U.S. Energy Information Administration (EIA). Includes operable bulk petroleum product terminals located in the 50 States and the District of Columbia with a total bulk shell storage capacity of 50,000 barrels or more, and/or the ability to receive volumes from tanker, barge, or pipeline; also rail terminals handling the loading and unloading of crude oil that were active between 2017 and 2018. Petroleum product terminals comes from the EIA-815 Bulk Terminal and Blender Report, which includes working, shell in operation, and shell idle for several major product groupings. Survey locations adjusted using public data.

**Government Publication Date:** Jun 29, 2022

**LIEN on Property:**[SEMS LIEN](#)

The U.S. Environmental Protection Agency's (EPA) Superfund Enterprise Management System (SEMS) provides Lien details on applicable properties, such as the Superfund lien on property activity, the lien property information, and the parties associated with the lien.

**Government Publication Date:** Jul 26, 2023

**Superfund Decision Documents:**[SUPERFUND ROD](#)

This database contains a list of decision documents for Superfund sites. Decision documents serve to provide the reasoning for the choice of (or) changes to a Superfund Site cleanup plan. The decision documents include completed Records of Decision (ROD), ROD Amendments, Explanations of Significant Differences (ESD) for active and archived sites stored in the Superfund Enterprise Management System (SEMS), along with other associated memos and files. This information is maintained and made available by the U.S. Environmental Protection Agency.

**Government Publication Date:** Mar 23, 2023

**Formerly Utilized Sites Remedial Action Program:**[DOE FUSRAP](#)

The U.S. Department of Energy (DOE) established the Formerly Utilized Sites Remedial Action Program (FUSRAP) in 1974 to remediate sites where radioactive contamination remained from the Manhattan Project and early U.S. Atomic Energy Commission (AEC) operations. The DOE Office of Legacy Management (LM) established long-term surveillance and maintenance (LTS&M) requirements for remediated FUSRAP sites. DOE evaluates the final site conditions of a remediated site on the basis of risk for different future uses. DOE then confirms that LTS&M requirements will maintain protectiveness.

**Government Publication Date:** Mar 4, 2017

**State****Methane Gas Study Sites:**[LANDFILL METHANE](#)

This Investigation of Methane Gas Hazards report was prepared by the Denver Office of Emergency Preparedness in 1981. The purpose of this study was to assess the actual and potential generation, migration, explosive and related problems associated with specified landfills, and to identify existing and potential problems, suggested strategies to prevent, abate, and control such problems and recommend investigative and monitoring functions as may be deemed necessary. The Colorado Department of Health selected eight landfills as priorities due to population density and potential hazards to population and property.

**Government Publication Date:** Jan 2, 1981

**Environmental Covenants and Use Restrictions:**[COVENANTS](#)

Boundaries of environmental covenant/environmental use restriction sites made available by the Colorado Department of Public Health & Environment (CDPHE). CDPHE has the authority to approve requests to restrict the future use of a property using an enforceable agreement called an environmental covenant. Land use restrictions may be used to ensure the cleanup remedy adequately protects human health and the environment when a contaminated site isn't cleaned up completely.

**Government Publication Date:** Apr 20, 2023

**Superfund National Priorities List and Natural Resource Damages sites:**

SUPERFUND NRD

Boundaries of Superfund National Priorities List sites and Natural Resource Damages sites in Colorado made available by the Colorado Department of Public Health and Environment (CDPHE).

**Government Publication Date:** Apr 14, 2023

**Superfund Sites:**

SHWS

A list of Superfund sites in Colorado made available by the Colorado Department of Public Health and Environment (CDPHE). In Colorado, the cleanup of Superfund sites is overseen by the CDPHE or the Environmental Protection Agency (EPA). This list includes active Superfund sites, deleted sites, proposed sites, and natural resource damage sites.

**Government Publication Date:** Jun 29, 2022

**Delisted Superfund Sites:**

DELISTED SHWS

Sites which once appeared on - but have since been removed from - the list of Superfund sites in Colorado made available by the Colorado Department of Public Health and Environment (CDPHE). In Colorado, the cleanup of Superfund sites is overseen by the CDPHE or the Environmental Protection Agency (EPA).

**Government Publication Date:** Jun 29, 2022

**Solid Waste Facilities and Landfills:**

SWF/LF

The Colorado Department of Public Health and Environment (CDPHE) regulates the management and disposal of solid waste, landfill facilities, waste tire registrants, and waste tire haulers. Solid waste and landfills data is provided by the CDPHE's Hazardous Materials and Waste Management Division's Solid Waste Report and the Environmental Sites Search Map Application. Waste tire data is made available by the CDPHE.

**Government Publication Date:** May 4, 2023

**Historical Solid Waste (Closed or Abandoned Landfills):**

HIST LF

In the early 1980s the Hazardous Materials Waste Management Division of the Colorado Department of Public Health and Environment (CDPHE) conducted a survey of staff members and local agencies. The information gathered was compiled in 1984 for sites that were known or thought to have waste issues. The information is not complete and generally not very definitive or verifiable. This data became the Solid Waste Historical Data. The data is not maintained and has not been since the late 1980s.

**Government Publication Date:** 1984

**Tri-County Historic Landfills:**

HIST LANDFILLS

A list of historical landfills made available by the Tri-County Health Department (TCHD). The TCHD serves Adams, Arapahoe, and Douglas Counties.

**Government Publication Date:** Jun 1, 2022

**Registered Recycling Facilities:**

RECYCLING

This list of registered recycling facilities in Colorado is maintained by the Colorado Department of Public Health & Environment (CDPHE). This list includes primarily processing facilities for recyclable materials, such as material recovery facilities, industrial recycling operations, and recyclable material end user sites. Collection centers/drop-off locations are not included unless the site is also processing recyclable materials (separating, sorting, dismantling, grinding, baling, etc.).

**Government Publication Date:** Mar 13, 2023

**Leaking Storage Tanks:**

LST

A list of leaking storage tank locations from the Colorado Storage Tank Information System (COSTIS) database, including those which have applied for reimbursement from the Petroleum Storage Tank Fund. This list is made available by the Division of Oil and Public Safety (OPS) of the Colorado Department of Labor and Employment (CDLE) and includes data compiled from applicable FOIA files, COSTIS files and other OPS datasets. Classified military tanks are excluded from this data.

**Government Publication Date:** Jun 1, 2023

**LUST Trust Sites:**

LUST TRUST

The Division of Oil and Public Safety of the Colorado Department of Labor and Employment (CDLE) manages a Petroleum Storage Tank Fund (The Fund) that receives and processes applications to the Fund for reimbursement of costs related to assessment and cleanup of petroleum contaminated sites. Classified military tanks are excluded from this data.

**Government Publication Date:** Jun 1, 2023

**Delisted Leaking Storage Tanks:**

DELISTED LST

This database contains a list of leaking storage tank sites and their Funds for reimbursement of costs related to assessment and cleanup that were removed from the Colorado Department of Labor and Employment (CDLE) database.

**Government Publication Date:** Jun 1, 2023

**Underground Storage Tanks:**

UST

A list of underground storage tanks from the Colorado Storage Tank Information System (COSTIS) database. This database is made available by the Division of Oil and Public Safety (OPS) of the Colorado Department of Labor and Employment (CDLE). Data is compiled from applicable FOIA files, COSTIS files and other OPS datasets. Classified military tanks are excluded from this data.

**Government Publication Date:** Jun 1, 2023

**Aboveground Storage Tanks:**

AST

A list of aboveground storage tanks from the Colorado Storage Tank Information System (COSTIS) database. This list is made available by the Division of Oil and Public Safety (OPS) of the Colorado Department of Labor and Employment (CDLE). Data is compiled from applicable FOIA files, COSTIS files and other OPS datasets. Classified military tanks are excluded from this data.

**Government Publication Date:** Jun 1, 2023

**Storage Tank Information System (COSTIS):**

TANKS

This storage tank listing is provided by the Colorado Department of Labor and Employment, Division of Oil and Public Safety (OPS). The OPS manages the Colorado Storage Tank Information System (COSTIS) database which stores information on these facilities. This tank data includes facilities with liquefied petroleum gas, liquefied natural gas, and compressed natural gas tanks which are not classified as either underground storage tanks or aboveground storage tanks. Data is compiled from applicable FOIA files, COSTIS files and other OPS datasets. Classified military tanks are excluded from this data.

**Government Publication Date:** Jun 1, 2023

**Delisted Storage Tanks:**

DTNK

This database contains a list of closed storage tank sites that were removed from the Division of Oil and Public Safety of the Colorado Department of Labor and Employment (CDLE) Tank Information System.

**Government Publication Date:** Jun 1, 2023

**Environmental Covenants and Environmental Use Restrictions List:**

AUL

The Colorado Department of Public Health and Environment (CDPHE) maintains a list of sites that have environmental covenants and use restrictions in place. Land use restrictions may be used to ensure the cleanup remedy adequately protects human health and the environment when a contaminated site is not cleaned up completely.

**Government Publication Date:** Apr 20, 2023

**Voluntary Cleanup and Redevelopment Program Sites:**

VCP

The Voluntary Cleanup and Redevelopment Program (VCUP) of the Colorado Department of Public Health and Environment (CDPHE) was created in 1994 with the objective to facilitate the redevelopment and transfer of contaminated properties. This VCUP site listing includes applicable active and inactive sites from the CDPHE Voluntary Cleanup Open Records data file and map layer.

**Government Publication Date:** Aug 2, 2023

**Brownfield Sites:**

BROWNFIELDS

A list of Brownfields Program sites from the Hazardous Materials and Waste Management Division and the Colorado Environmental Records Search Interactive Map made available by the Colorado Department of Public Health and Environment (CDPHE). Sites which go untouched because of their real or perceived contamination can be rehabilitated using the CDPHE Brownfields Program.

**Government Publication Date:** Apr 3, 2023

**Tribal****Leaking Underground Storage Tanks on Tribal/Indian Lands:**

INDIAN LUST

This list of leaking underground storage tanks (LUSTs) on Tribal/Indian Lands in Region 8, which includes Colorado, is made available by the United States Environmental Protection Agency (EPA).

**Government Publication Date:** Apr 20, 2023

**Underground Storage Tanks on Tribal/Indian Lands:**

INDIAN UST

This list of underground storage tanks (USTs) on Tribal/Indian Lands in Region 8, which includes Colorado, is made available by the United States Environmental Protection Agency (EPA).

**Government Publication Date:** Apr 20, 2023

**Delisted Tribal Leaking Storage Tanks:**[DELISTED INDIAN LST](#)

Leaking Underground Storage Tank (LUST) facilities which once appeared on - and have since been removed from - the Regional Tribal/Indian LUST lists made available by the United States Environmental Protection Agency (EPA).

**Government Publication Date: Apr 26, 2023**

**Delisted Tribal Underground Storage Tanks:**[DELISTED INDIAN UST](#)

Underground Storage Tank (UST) facilities which once appeared on - and have since been removed from - the Regional Tribal/Indian UST lists made available by the United States Environmental Protection Agency (EPA).

**Government Publication Date: Apr 26, 2023**

**County**

**No County databases were selected to be included in the search.**

**Additional Environmental Record Sources****Federal****Facility Registry Service/Facility Index:**[FINDS/FRS](#)

The Facility Registry Service (FRS) is a centrally managed database that identifies facilities, sites, or places subject to environmental regulations or of environmental interest. FRS creates high-quality, accurate, and authoritative facility identification records through rigorous verification and management procedures that incorporate information from program national systems, state master facility records, and data collected from EPA's Central Data Exchange registrations and data management personnel. This list is made available by the Environmental Protection Agency (US EPA).

**Government Publication Date: Aug 18, 2022**

**Toxics Release Inventory (TRI) Program:**[TRIS](#)

The U.S. Environmental Protection Agency's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of toxic chemicals from U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment. There are currently 770 individually listed chemicals and 33 chemical categories covered by the TRI Program. Facilities that manufacture, process or otherwise use these chemicals in amounts above established levels must submit annual reporting forms for each chemical. Note that the TRI chemical list does not include all toxic chemicals used in the U.S. One of TRI's primary purposes is to inform communities about toxic chemical releases to the environment.

**Government Publication Date: Oct 19, 2022**

**PFOA/PFOS Contaminated Sites:**[PFAS NPL](#)

This list of National Priorities List (NPL) and related Superfund Alternative Agreement (SAA) sites where PFOA or PFOS contaminants have been detected in water and/or soil is provided by the U.S. Environmental Protection Agency (EPA). EPA Disclaimer with FOIA file: Inclusion on the list does not necessarily mean that drinking water has been affected, nor does inclusion mean that anyone at the site has been exposed or is at risk for detrimental health effects.

**Government Publication Date: Jun 15, 2023**

**Federal Agency Locations with Known or Suspected PFAS Detections:**[PFAS FED SITES](#)

List of Federal agency locations with known or suspected detections of Per- and Polyfluoroalkyl Substances (PFAS), made available by the U.S. Environmental Protection Agency (EPA) in their PFAS Analytic Tools data. EPA outlines that these data are gathered from several federal entities, such as the Federal Superfund program, Department of Defense (DOD), National Aeronautics and Space Administration, Department of Transportation, and Department of Energy. The dates this data was extracted for the PFAS Analytic Tools range from March 2022 to April 2023. Sites on this list do not necessarily reflect the source/s of PFAS contamination and detections do not indicate level of risk or human exposure at the site. Agricultural notifications in this data are limited to DOD sites only. At this time, the EPA is aware that this list is not comprehensive of all Federal agencies.

**Government Publication Date: Apr 24, 2023**

**SSEHRI PFAS Contamination Sites:**[PFAS SSEHRI](#)

This PFAS Contamination Site Tracker database is compiled by the Social Science Environmental Health Research Institute (SSEHRI) at Northeastern University. According to the SSEHRI, the database records qualitative and quantitative data from each known site of PFAS contamination, including timeline of discovery, sources, levels, health impacts, community response, and government response. The goal of this database is to compile information and support public understanding of the rapidly unfolding issue of PFAS contamination. All data presented was extracted from government websites, news articles, or publicly available documents, and this is cited in the tracker. Locations for the Known PFAS Contamination Sites are sourced from the PFAS Sites and Community Resources Map, credited to the Northeastern University's PFAS Project Lab, Silent Spring Institute, and the PFAS-REACH team. Disclaimer: The source conveys the data undergoes regular updates as new information becomes available, some sites may be missing and/or contain information that is incorrect or outdated, as well as their information represents all contamination sites SSEHRI is aware of, not all possible contamination sites. This data is not intended to be used for legal purposes. Access the following source link for the most current information: <https://pfasproject.com/pfas-sites-and-community-resources/>

**Government Publication Date: Oct 9, 2022**

#### **National Response Center PFAS Spills:**

**ERNS PFAS**

This Per- and Poly-Fluoroalkyl Substances (PFAS) Spills dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. The National Response Center (NRC), operated by the U.S. Coast Guard, serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the "Material Involved" or "Incident Description" fields. Limitations: The data from the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Keyword searches may misidentify some incident reports that do not contain PFAS. This dataset should also not be considered to be exhaustive of all PFAS spills/release incidents.

**Government Publication Date: Apr 15, 2023**

#### **PFAS NPDES Discharge Monitoring:**

**PFAS NPDES**

This list of National Pollutant Discharge Elimination System (NPDES) permitted facilities with required monitoring for Per- and Polyfluoroalkyl (PFAS) Substances is made available via the U.S. Environmental Protection Agency (EPA)'s PFAS Analytic Tools. Any point-source wastewater discharger to waters of the United States must have a NPDES permit, which defines a set of parameters for pollutants and monitoring to ensure that the discharge does not degrade water quality or impair human health. This list includes NPDES permitted facilities associated with permits that monitor for Per- and Polyfluoroalkyl Substances (PFAS), limited to the years 2007 - present. EPA further advises the following regarding these data: currently, fewer than half of states have required PFAS monitoring for at least one of their permittees, and fewer states have established PFAS effluent limits for permittees. For states that may have required monitoring, some reporting and data transfer issues may exist on a state-by-state basis.

**Government Publication Date: May 1, 2023**

#### **Perfluorinated Alkyl Substances (PFAS) from Toxic Release Inventory:**

**PFAS TRI**

List of Toxics Release Inventory (TRI) facilities at which the reported chemical is a per- or polyfluoroalkyl (PFAS) substance included in the U.S. Environmental Protection Agency's (EPA) consolidated PFAS Master List of PFAS Substances. Encompasses Toxics Release Inventory records included in the EPA PFAS Analytic Tools. The EPA's TRI database currently tracks information on disposal or releases of 770 individually listed toxic chemicals and 33 chemical categories from thousands of U.S. facilities and details about how facilities manage those chemicals through recycling, energy recovery, and treatment.

**Government Publication Date: Oct 19, 2022**

#### **Perfluorinated Alkyl Substances (PFAS) Water Quality:**

**PFAS WATER**

The Water Quality Portal (WQP) is a cooperative service sponsored by the United States Geological Survey (USGS), the Environmental Protection Agency (EPA), and the National Water Quality Monitoring Council (NWQMC). This listing includes records from the Water Quality Portal where the characteristic (environmental measurement) is in the Environmental Protection Agency (EPA)'s consolidated Master List of PFAS Substances.

**Government Publication Date: Jul 20, 2020**

#### **PFAS TSCA Manufacture and Import Facilities:**

**PFAS TSCA**

The U.S. Environmental Protection Agency (EPA) issued the Chemical Data Reporting (CDR) Rule under the Toxic Substances Control Act (TSCA) and requires chemical manufacturers and facilities that manufacture or import chemical substances to report data to EPA. This list is specific only to TSCA Manufacture and Import Facilities with reported per- and poly-fluoroalkyl (PFAS) substances. Data file is sourced from EPA's PFAS Analytic Tools TSCA dataset which includes CDR/Inventory Update Reporting data from 1998 up to 2020. Disclaimer: This data file includes production and importation data for chemicals identified in EPA's CompTox Chemicals Dashboard list of PFAS without explicit structures and list of PFAS structures in DSSTox. Note that some regulations have specific chemical structure requirements that define PFAS differently than the lists in EPA's CompTox Chemicals Dashboard. Reporting information on manufactured or imported chemical substance amounts should not be compared between facilities, as some companies claim Chemical Data Reporting Rule data fields for PFAS information as Confidential Business Information.

**Government Publication Date: Jan 5, 2023**

#### **PFAS Waste Transfers from RCRA e-Manifest :**

**PFAS E-MANIFEST**

This Per- and Poly-Fluoroalkyl Substances (PFAS) Waste Transfers dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. Every shipment of hazardous waste in the U.S. must be accompanied by a shipment manifest, which is a critical component of the cradle-to-grave tracking of wastes mandated by the Resource Conservation and Recovery Act (RCRA). According to the EPA, currently no Federal Waste Code exists for any PFAS compounds. To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: • PFAS • PFOA • PFOS • PERFL • AFFF • GENX • GEN-X (plus the Vermont state-specific waste codes). Limitations: Amount or concentration of PFAS being transferred cannot be determined from the manifest information. Keyword searches may misidentify some manifest records that do not contain PFAS. This dataset should also not be considered to be exhaustive of all PFAS waste transfers.

**Government Publication Date:** Apr 9, 2023

#### **PFAS Industry Sectors:**

**PFAS IND**

This Per- and Poly-Fluoroalkyl Substances (PFAS) Industry Sectors dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. The EPA developed the dataset from various sources that show which industries may be handling PFAS including: EPA's Enforcement and Compliance History Online (ECHO) records restricted to potential PFAS-handling industry sectors; ECHO records for Fire Training Sites identified where fire-fighting foam may have been used in training exercises; and 14 CFR Part 139 Airports compiled from historic and current records from the FAA Airport Data and Information Portal. Since July 2006, all certificated Part 139 Airports are required to have fire-fighting foam onsite that meet certain military specifications, which to date have been fluorinated (Aqueous Film Forming Foam). Limitations: Inclusion in this dataset does not indicate that PFAS are being manufactured, processed, used, or released by the facility. Listed facilities potentially handle PFAS based on their industrial profile, but are unconfirmed by the EPA. Keyword searches in ECHO for Fire Training sites may misidentify some facilities and should not be considered to be an exhaustive list of fire training facilities in the U.S.

**Government Publication Date:** Apr 16, 2023

#### **Hazardous Materials Information Reporting System:**

**HMIRS**

US DOT - Department of Transportation Pipeline and Hazardous Materials Safety Administration (PHMSA) Incidents Reports Database taken from Hazmat Intelligence Portal, U.S. Department of Transportation.

**Government Publication Date:** Sep 1, 2020

#### **National Clandestine Drug Labs:**

**NCDL**

The U.S. Department of Justice ("the Department"), Drug Enforcement Administration (DEA), provides this data as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy.

**Government Publication Date:** Feb 8, 2023

#### **Toxic Substances Control Act:**

**TSCA**

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The CDR enables EPA to collect and publish information on the manufacturing, processing, and use of commercial chemical substances and mixtures (referred to hereafter as chemical substances) on the TSCA Chemical Substance Inventory (TSCA Inventory). This includes current information on chemical substance production volumes, manufacturing sites, and how the chemical substances are used. This information helps the Agency determine whether people or the environment are potentially exposed to reported chemical substances. EPA publishes submitted CDR data that is not Confidential Business Information (CBI).

**Government Publication Date:** Apr 11, 2019

#### **Hist TSCA:**

**HIST TSCA**

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The 2006 IUR data summary report includes information about chemicals manufactured or imported in quantities of 25,000 pounds or more at a single site during calendar year 2005. In addition to the basic manufacturing information collected in previous reporting cycles, the 2006 cycle is the first time EPA collected information to characterize exposure during manufacturing, processing and use of organic chemicals. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information.

**Government Publication Date:** Dec 31, 2006

#### **FTTS Administrative Case Listing:**

**FTTS ADMIN**

An administrative case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

**Government Publication Date:** Jan 19, 2007

**FTTS Inspection Case Listing:**

FTTS INSP

An inspection case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

**Government Publication Date:** Jan 19, 2007

**Potentially Responsible Parties List:**

PRP

Early in the site cleanup process, the U.S. Environmental Protection Agency (EPA) conducts a search to find the Potentially Responsible Parties (PRPs). The EPA looks for evidence to determine liability by matching wastes found at the site with parties that may have contributed wastes to the site. This listing contains PRPs, Noticed Parties, at sites in the EPA's Superfund Enterprise Management System (SEMS).

**Government Publication Date:** Jan 25, 2023

**State Coalition for Remediation of Drycleaners Listing:**

SCRD DRYCLEANER

The State Coalition for Remediation of Drycleaners (SCRD) was established in 1998, with support from the U.S. Environmental Protection Agency (EPA) Office of Superfund Remediation and Technology Innovation. Coalition members are states with mandated programs and funding for drycleaner site remediation. Current members are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin. Since 2017, the SCRD no longer maintains this data, refer to applicable state source data where available.

**Government Publication Date:** Nov 08, 2017

**Integrated Compliance Information System (ICIS):**

ICIS

The Integrated Compliance Information System (ICIS) database contains integrated enforcement and compliance information across most of U.S. Environmental Protection Agency's (EPA) programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained by the EPA Headquarters and at the Regional offices. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.

**Government Publication Date:** Jan 21, 2023

**Drycleaner Facilities:**

FED DRYCLEANERS

A list of drycleaner facilities from Enforcement and Compliance History Online (ECHO) data as made available by the U.S. Environmental Protection Agency (EPA), sourced from the ECHO Exporter file. The EPA tracks facilities that possess NAIC and SIC codes that classify businesses as drycleaner establishments.

**Government Publication Date:** Apr 15, 2023

**Delisted Drycleaner Facilities:**

DELISTED FED DRY

List of sites removed from the list of Drycleaner Facilities (sites in the EPA's Integrated Compliance Information System (ICIS) with NAIC or SIC codes identifying the business as a drycleaner establishment).

**Government Publication Date:** Apr 15, 2023

**Formerly Used Defense Sites:**

FUDS

Formerly Used Defense Sites (FUDS) are properties that were formerly owned by, leased to, or otherwise possessed by and under the jurisdiction of the Secretary of Defense prior to October 1986, where the Department of Defense (DOD) is responsible for an environmental restoration. The FUDS Annual Report to Congress (ARC) is published by the U.S. Army Corps of Engineers (USACE). This data is compiled from the USACE's Geospatial FUDS data layers and Homeland Infrastructure Foundation-Level Data (HIFLD) FUDS dataset.

**Government Publication Date:** Jul 12, 2022

**FUDS Munitions Response Sites:**

FUDS MRS

Boundaries of Munitions Response Sites (MRS), published with the Formerly Used Defense Sites (FUDS) Annual Report to Congress (ARC) by the U.S. Army Corps of Engineers (USACE). An MRS is a discrete location within a Munitions response area (MRA) that is known to require a munitions response. An MRA means any area on a defense site that is known or suspected to contain unexploded ordnance (UXO), discarded military munitions (DMM), or munitions constituents (MC). This data is compiled from the USACE's Geospatial MRS data layers and Homeland Infrastructure Foundation-Level Data (HIFLD) MRS dataset.

**Government Publication Date:** Jul 12, 2022

**Former Military Nike Missile Sites:**

FORMER NIKE

This information was taken from report DRXTH-AS-IA-83A016 (Historical Overview of the Nike Missile System, 12/1984) which was performed by Environmental Science and Engineering, Inc. for the U.S. Army Toxic and Hazardous Materials Agency Assessment Division. The Nike system was deployed between 1954 and the mid-1970's. Among the substances used or stored on Nike sites were liquid missile fuel (JP-4); starter fluids (UDKH, aniline, and furfuryl alcohol); oxidizer (IRFNA); hydrocarbons (motor oil, hydraulic fluid, diesel fuel, gasoline, heating oil); solvents (carbon tetrachloride, trichloroethylene, trichloroethane, stoddard solvent); and battery electrolyte. The quantities of material a disposed of and procedures for disposal are not documented in published reports. Virtually all information concerning the potential for contamination at Nike sites is confined to personnel who were assigned to Nike sites. During deactivation most hardware was shipped to depot-level supply points. There were reportedly instances where excess materials were disposed of on or near the site itself at closure. There was reportedly no routine site decontamination.

**Government Publication Date:** Dec 2, 1984

**PHMSA Pipeline Safety Flagged Incidents:**

**PIPELINE INCIDENT**

A list of flagged pipeline incidents made available by the U.S. Department of Transportation (US DOT) Pipeline and Hazardous Materials Safety Administration (PHMSA). PHMSA regulations require incident and accident reports for five different pipeline system types.

**Government Publication Date:** Dec 30, 2022

**Material Licensing Tracking System (MLTS):**

**MLTS**

A list of sites that store radioactive material subject to the Nuclear Regulatory Commission (NRC) licensing requirements. This list is maintained by the NRC. As of September 2016, the NRC no longer releases location information for sites. Site locations were last received in July 2016.

**Government Publication Date:** May 11, 2021

**Historic Material Licensing Tracking System (MLTS) sites:**

**HIST MLTS**

A historic list of sites that have inactive licenses and/or removed from the Material Licensing Tracking System (MLTS). In some cases, a site is removed from the MLTS when the state becomes an "Agreement State". An Agreement State is a State that has signed an agreement with the Nuclear Regulatory Commission (NRC) authorizing the State to regulate certain uses of radioactive materials within the State.

**Government Publication Date:** Jan 31, 2010

**Mines Master Index File:**

**MINES**

The Master Index File (MIF) is provided by the United State Department of Labor, Mine Safety and Health Administration (MSHA). This file, which was originally created in the 1970's, contained many Mine-IDs that were invalid. MSHA removes invalid IDs from the MIF upon discovery. MSHA applicable data includes the following: all Coal and Metal/Non-Metal mines under MSHA's jurisdiction since 1/1/1970; mine addresses for all mines in the database except for Abandoned mines prior to 1998 from MSHA's legacy system (addresses may or may not correspond with the physical location of the mine itself); violations that have been assessed penalties as a result of MSHA inspections beginning on 1/1/2000; and violations issued as a result of MSHA inspections conducted beginning on 1/1/2000.

**Government Publication Date:** Nov 7, 2022

**Surface Mining Control and Reclamation Act Sites:**

**SMCRA**

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by the Office of Surface Mining Reclamation and Enforcement (OSMRE) to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). This inventory contains information on the type and extent of Abandoned Mine Land (AML) impacts, as well as information on the cost associated with the reclamation of those problems. The data is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed. Disclaimer: Per the OSMRE, States and tribes who enter their data into eAMLIS (AML Inventory System) may truncate their latitude and longitude so the precise location of usually dangerous AMLs is not revealed in an effort to protect the public from searching for these AMLs, most of which are on private property. If more precise location information is needed, please contact the applicable state/tribe of interest.

**Government Publication Date:** Jun 13, 2023

**Mineral Resource Data System:**

**MRDS**

The Mineral Resource Data System (MRDS) is a collection of reports describing metallic and nonmetallic mineral resources throughout the world. Included are deposit name, location, commodity, deposit description, geologic characteristics, production, reserves, resources, and references. This database contains the records previously provided in the Mineral Resource Data System (MRDS) of USGS and the Mineral Availability System/Mineral Industry Locator System (MAS/MILS) originated in the U.S. Bureau of Mines, which is now part of USGS. The USGS has ceased systematic updates of the MRDS database with their focus more recently on deposits of critical minerals while providing a well-documented baseline of historical mine locations from USGS topographic maps.

**Government Publication Date:** Mar 15, 2016

**DOE Legacy Management Sites:**

**LM SITES**

The U.S. Department of Energy (DOE) Office of Legacy Management (LM) currently manages radioactive and chemical waste, environmental contamination, and hazardous material at over 100 sites across the U.S. The LM manages sites with diverse regulatory drivers (statutes or programs that direct cleanup and management requirements at DOE sites) or as part of internal DOE or congressionally-recognized programs, such as but not limited to: Formerly Utilized Sites Remedial Action Program (FUSRAP), Uranium Mill Tailings Radiation Control Act (UMTRCA Title I, Title II), Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), Resource Conservation and Recovery Act (RCRA), Decontamination and Decommissioning (D&D), Nuclear Waste Policy Act (NWPA). This site listing includes data exported from the DOE Office of LM's Geospatial Environmental Mapping System (GEMS). GEMS Data disclaimer: The DOE Office of LM makes no representation or warranty, expressed or implied, regarding the use, accuracy, availability, or completeness of the data presented herein.

**Government Publication Date: May 25, 2023**

#### **Alternative Fueling Stations:**

**ALT FUELS**

This list of alternative fueling stations is sourced from the Alternative Fuels Data Center (AFDC). The U.S. Department of Energy's Office of Energy Efficiency & Renewable Energy launched the AFDC in 1991 as a repository for alternative fuel vehicle performance data, which provides a wealth of information and data on alternative and renewable fuels, advanced vehicles, fuel-saving strategies, and emerging transportation technologies. The data includes Biodiesel (B20 and above), Compressed Natural Gas (CNG), Electric, Ethanol (E85), Hydrogen, Liquefied Natural Gas (LNG), Propane (LPG), and Renewable Diesel (R20 and above) fuel type locations.

**Government Publication Date: Jun 5, 2023**

#### **Superfunds Consent Decrees:**

**CONSENT DECREES**

This list of Superfund consent decrees is provided by the Department of Justice, Environment & Natural Resources Division (ENRD) through a Freedom of Information Act (FOIA) applicable file. This listing includes Consent Decrees for CERCLA or Superfund Sites filed and/or as proposed within the ENRD's Case Management System (CMS) since 2010. CMS may not reflect the latest developments in a case nor can the agency guarantee the accuracy of the data. ENRD Disclaimer: Congress excluded three discrete categories of law enforcement and national security records from the requirements of the FOIA; response is limited to those records that are subject to the requirements of the FOIA; however, this should not be taken as an indication that excluded records do, or do not, exist.

**Government Publication Date: Apr 19, 2023**

#### **Air Facility System:**

**AFS**

This EPA retired Air Facility System (AFS) dataset contains emissions, compliance, and enforcement data on stationary sources of air pollution. Regulated sources cover a wide spectrum; from large industrial facilities to relatively small operations such as dry cleaners. AFS does not contain data on facilities that are solely asbestos demolition and/or renovation contractors, or landfills. ECHO Clean Air Act data from AFS are frozen and reflect data as of October 17, 2014; the EPA retired this system for Clean Air Act stationary sources and transitioned to ICIS-Air.

**Government Publication Date: Oct 17, 2014**

#### **Registered Pesticide Establishments:**

**SSTS**

This national list of active EPA-registered foreign and domestic pesticide and/or device-producing establishments is based on data from the Section Seven Tracking System (SSTS). The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Section 7 requires that each producing establishment must place its EPA establishment number on the label or immediate container of each pesticide, active ingredient or device produced. An EPA establishment number on a pesticide product label identifies the EPA registered location where the product was produced. The list of establishments is made available by the U.S. Environmental Protection Agency (EPA).

**Government Publication Date: Mar 1, 2023**

#### **Polychlorinated Biphenyl (PCB) Transformers:**

**PCBT**

Locations of Transformers Containing Polychlorinated Biphenyls (PCBs) registered with the United States Environmental Protection Agency. PCB transformer owners must register their transformer(s) with EPA. Although not required, PCB transformer owners who have removed and properly disposed of a registered PCB transformer may notify EPA to have their PCB transformer de-registered. Data made available by EPA.

**Government Publication Date: Oct 15, 2019**

#### **Polychlorinated Biphenyl (PCB) Notifiers:**

**PCB**

Facilities included in the national list of facilities that have notified the United States Environmental Protection Agency (EPA) of Polychlorinated Biphenyl (PCB) activities. Any company or person storing, transporting or disposing of PCBs or conducting PCB research and development must notify the EPA and receive an identification number.

**Government Publication Date: Mar 20, 2023**

#### **State**

#### **Spills:**

**SPILLS**

A list of hazardous material spills and releases (including Meth Labs) that were reported to the Colorado Department of Public Health and Environment (CDPHE).

**Government Publication Date:** Apr 8, 2022

**Colorado Oil and Gas Conservation Commission Spills:**

[OG SPILLS](#)

A list of spills made available by the Colorado Oil and Gas Conservation Commission (COGCC).

**Government Publication Date:** Jun 7, 2023

**Dry Cleaning Facilities:**

[DRYCLEANERS](#)

A list of dry cleaners provided by the Colorado Department of Public Health and Environment (CDPHE) Hazardous Waste Compliance Assurance Unit and Stationary Sources Program.

**Government Publication Date:** Aug 3, 2023

**Delisted Dry Cleaning Facilities:**

[DELISTED DRYCLEANERS](#)

List of sites removed from the drycleaners database made available by the Department of Public Health & Environment.

**Government Publication Date:** Aug 3, 2023

**Air Pollution Control Division Permitted Facilities:**

[AIR PERMITS](#)

This list of Air Pollution Control Division Permitted Facilities is maintained by the Colorado Department of Public Health and Environment. The Stationary Sources Program evaluates and develops air permits for stationary sources in Colorado. The program inspects sources to determine compliance with air regulations and permit conditions and maintains an inventory of air pollution emissions throughout the state.

**Government Publication Date:** Feb 13, 2023

**Per- and Polyfluoroalkyl Substances (PFAS):**

[PFAS](#)

A list of facilities that reported storing or using AFFF or Class B firefighting foam, other PFAS chemicals, have reported PFAS passthrough, or have detectable limits of PFAS in their discharge.

**Government Publication Date:** Dec 8, 2020

**Asbestos Abatement and Demolition Projects:**

[ASBESTOS](#)

A list of Asbestos Abatement and Demolition Projects made available by the Colorado Department of Public Health and Environment (CDPHE), Air Pollution Control Division.

**Government Publication Date:** Dec 28, 2017

**Hazardous Waste Sites- Generator:**

[HAZ GEN](#)

A list of hazardous waste generators. This list is made available by the Colorado Department of Public Health and Environment (CDPHE).

**Government Publication Date:** Jun 30, 2003

**Permitted Facilities Listing:**

[PDES](#)

A list of permitted facilities tracked by the Water Quality Control Division of the Department of Public Health & Environment (DPHE). This list is the state version of the NPDES (National Pollution Discharge Elimination System).

**Government Publication Date:** May 1, 2023

**Hazardous Waste Sites- Treatment, Storage & Disposal:**

[HAZ TSD](#)

A list of facilities that treat, store, dispose, or recycle hazardous waste on-site. This list is made available by the Colorado Department of Public Health and Environment (CDPHE).

**Government Publication Date:** Jun 30, 2003

**Hazardous Waste Sites- Corrective Action:**

[HAZ CORRACT](#)

A list of hazardous waste generators with corrective actions. This list is made available by the Colorado Department of Public Health and Environment (CDPHE).

**Government Publication Date:** Jun 30, 2003

**Uranium Mill Tailings Sites:**

[UMTRA](#)

This list of former uranium mill sites in Colorado, with cleanup authorized by the Uranium Mill Tailings Remedial Action (UMTRA) program, was provided by the Colorado Department of Public Health and Environment. Because much of the cleanup is complete, the focus has shifted to primarily "Post-UMTRA issues," or the discovery of new uranium mill tailings material by private citizens, utility companies or local governments.

**Government Publication Date:** Sep 26, 2022

**Tribal**

*No Tribal additional environmental record sources available for this State.*

**County**

*No County additional environmental databases were selected to be included in the search.*

# Definitions

**Database Descriptions:** This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

**Detail Report:** This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

**Distance:** The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

**Direction:** The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

**Elevation:** The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

**Executive Summary:** This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

**Map Key:** The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

**Unplottables:** These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

## Property Information

Order Number:	23083102151p
Date Completed:	September 1, 2023
Project Number:	51-0693.00
Project Property:	Town Hall 420 Central Avenue_Dolores_CO 420 Central Avenue Dolores CO 81323

Topographic Information.....	2
Hydrologic Information.....	4
Geologic Information.....	9
Soil Information.....	11
Wells and Additional Sources.....	25
Summary.....	26
Detail Report.....	28
Radon Information.....	84
Appendix.....	85
Liability Notice.....	87

The ERIS **Physical Setting Report - PSR** provides comprehensive information about the physical setting around a site and includes a complete overview of topography and surface topology, in addition to hydrologic, geologic and soil characteristics. The location and detailed attributes of oil and gas wells, water wells, public water systems and radon are also included for review.

The compilation of both physical characteristics of a site and additional attribute data is useful in assessing the impact of migration of contaminants and subsequent impact on soils and groundwater.

### Disclaimer

This Report does not provide a full environmental evaluation for the site or adjacent properties. Please see the terms and disclaimer at the end of the Report for greater detail.

## Topographic Information

**Current USGS Topo (2019)**

**Quadrangle(s): Dolores West, CO; Dolores East, CO**

Source: USGS 7.5 Minute Topographic Map

## Topographic Information

The previous topographic map(s) are created by seamlessly merging and cutting current USGS topographic data. Below are shaded relief map(s), derived from USGS elevation data to show surrounding topography in further detail.

Topographic information at project property:

Elevation: 6,932.45 ft  
Slope Direction: SSE

Hydrologic Information

Wetland

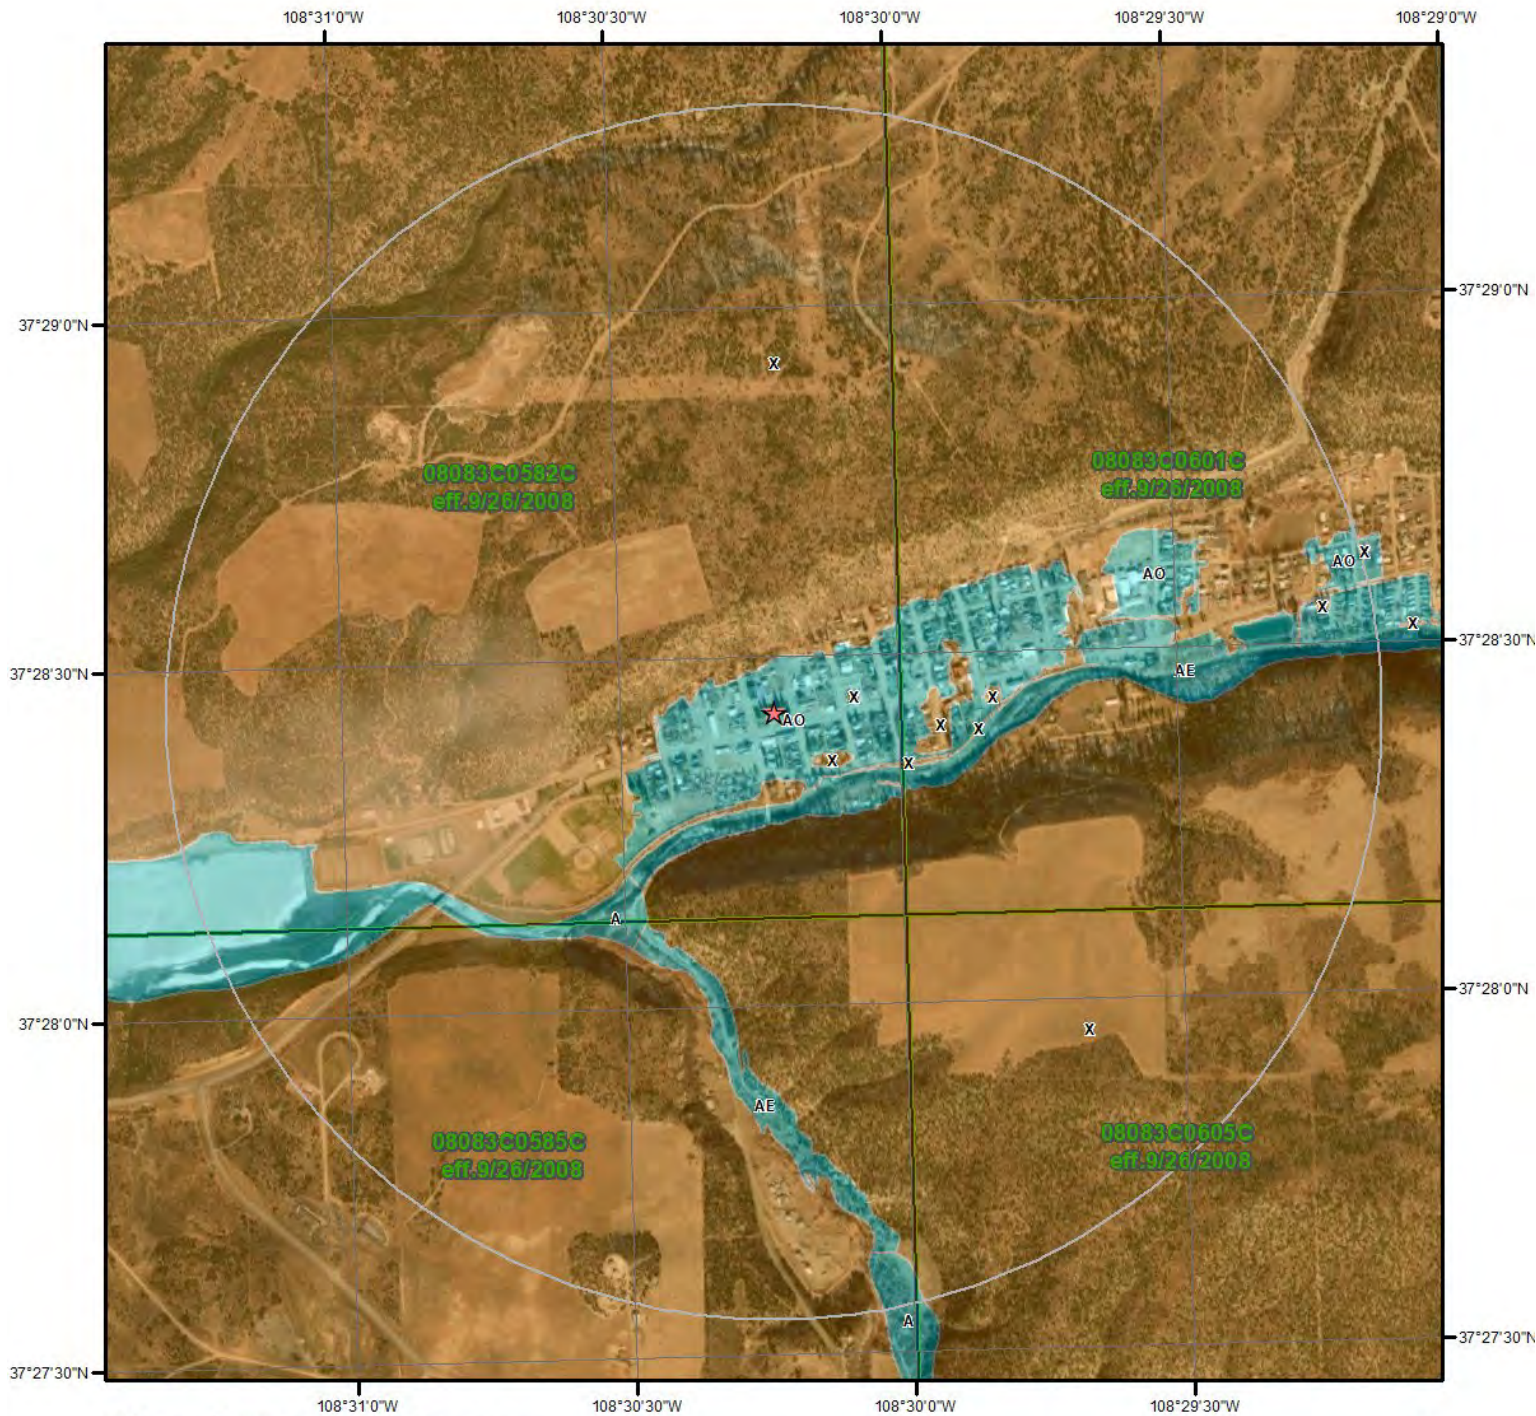

This map shows wetland existence using data from US Fish & Wildlife. Data coverage is shown to the right. Gray indicates no data available in the area.

Zone:	X
Zone subtype:	AREA OF MINIMAL FLOOD HAZARD

## FEMA Flood Zone Definitions

### Special Flood Hazard Areas – High Risk

Special Flood Hazard Areas represent the area subject to inundation by 1-percent-annual chance flood. Structures located within the SFHA have a 26-percent chance of flooding during the life of a standard 30-year mortgage. Federal floodplain management regulations and mandatory flood insurance purchase requirements apply in these zones.

ZONE	DESCRIPTION
A	Areas subject to inundation by the 1-percent-annual-chance flood event. Because detailed hydraulic analyses have not been performed, no Base Flood Elevations (BFEs) or flood depths are shown.
AE, A1-A30	Areas subject to inundation by the 1-percent-annual-chance flood event determined by detailed methods. BFEs are shown within these zones. (Zone AE is used on new and revised maps in place of Zones A1–A30.)
AH	Areas subject to inundation by 1-percent-annual-chance shallow flooding (usually areas of ponding) where average depths are 1–3 feet. BFEs derived from detailed hydraulic analyses are shown in this zone.
AO	Areas subject to inundation by 1-percent-annual-chance shallow flooding (usually sheet flow on sloping terrain) where average depths are 1–3 feet. Average flood depths derived from detailed hydraulic analyses are shown within this zone.
AR	Areas that result from the decertification of a previously accredited flood protection system that is determined to be in the process of being restored to provide base flood protection.
A99	Areas subject to inundation by the 1-percent-annual-chance flood event, but which will ultimately be protected upon completion of an under-construction Federal flood protection system. These are areas of special flood hazard where enough progress has been made on the construction of a protection system, such as dikes, dams, and levees, to consider it complete for insurance rating purposes. Zone A99 may be used only when the flood protection system has reached specified statutory progress toward completion. No BFEs or flood depths are shown.

### Coastal High Hazard Areas – High Risk

Coastal High Hazard Areas (CHHA) represent the area subject to inundation by 1-percent-annual chance flood, extending from offshore to the inland limit of a primary front al dune along an open coast and any other area subject to high velocity wave action from storms or seismic sources. Structures located within the CHHA have a 26-percent chance of flooding during the life of a standard 30-year mortgage. Federal floodplain management regulations and mandatory purchase requirements apply in these zones.

ZONE	DESCRIPTION
V	Areas along coasts subject to inundation by the 1-percent-annual-chance flood event with additional hazards associated with storm-induced waves. Because detailed coastal analyses have not been performed, no BFEs or flood depths are shown.
VE, V1-V30	Areas along coasts subject to inundation by the 1-percent-annual-chance flood event with additional hazards due to storm-induced velocity wave action. BFEs derived from detailed hydraulic coastal analyses are shown within these zones. (Zone VE is used on new and revised maps in place of Zones V1–V30.)

## Hydrologic Information

### Moderate and Minimal Risk Areas

Areas of moderate or minimal hazard are studied based upon the principal source of flood in the area. However, buildings in these zones could be flooded by severe, concentrated rainfall coupled with inadequate local drainage systems. Local stormwater drainage systems are not normally considered in a community's flood insurance study. The failure of a local drainage system can create areas of high flood risk within these zones. Flood insurance is available in participating communities, but is not required by regulation in these zones. Nearly 25-percent of all flood claims filed are for structures located within these zones.

ZONE	DESCRIPTION
B, X (shaded)	Moderate risk areas within the 0.2-percent-annual-chance floodplain, areas of 1-percent-annual-chance flooding where average depths are less than 1 foot, areas of 1-percent-annual-chance flooding where the contributing drainage area is less than 1 square mile, and areas protected from the 1-percent-annual-chance flood by a levee. No BFEs or base flood depths are shown within these zones. (Zone X (shaded) is used on new and revised maps in place of Zone B.)
C, X (unshaded)	Minimal risk areas outside the 1-percent and .2-percent-annual-chance floodplains. No BFEs or base flood depths are shown within these zones. (Zone X (unshaded) is used on new and revised maps in place of Zone C.)

### Undetermined Risk Areas

ZONE	DESCRIPTION
D	Unstudied areas where flood hazards are undetermined, but flooding is possible. No mandatory flood insurance purchase requirements apply, but coverage is available in participating communities.

**Geologic Information**

**Geologic Units**

This maps shows geologic units in the area. Please refer to the report for detailed descriptions.

## Geologic Information

The previous page shows USGS geology information. Detailed information about each unit is provided below.

---

### Geologic Unit Kdb

Unit Name:	Dakota Sandstone and Burro Canyon Fm
Unit Age:	Phanerozoic   Mesozoic   Cretaceous
Primary Rock Type:	sandstone
Secondary Rock Type:	shale
Unit Description:	Sandstone, shale, and conglomerate. In northwest and west-central: Lower Cretaceous. In southwest: Lower and Upper Cretaceous.

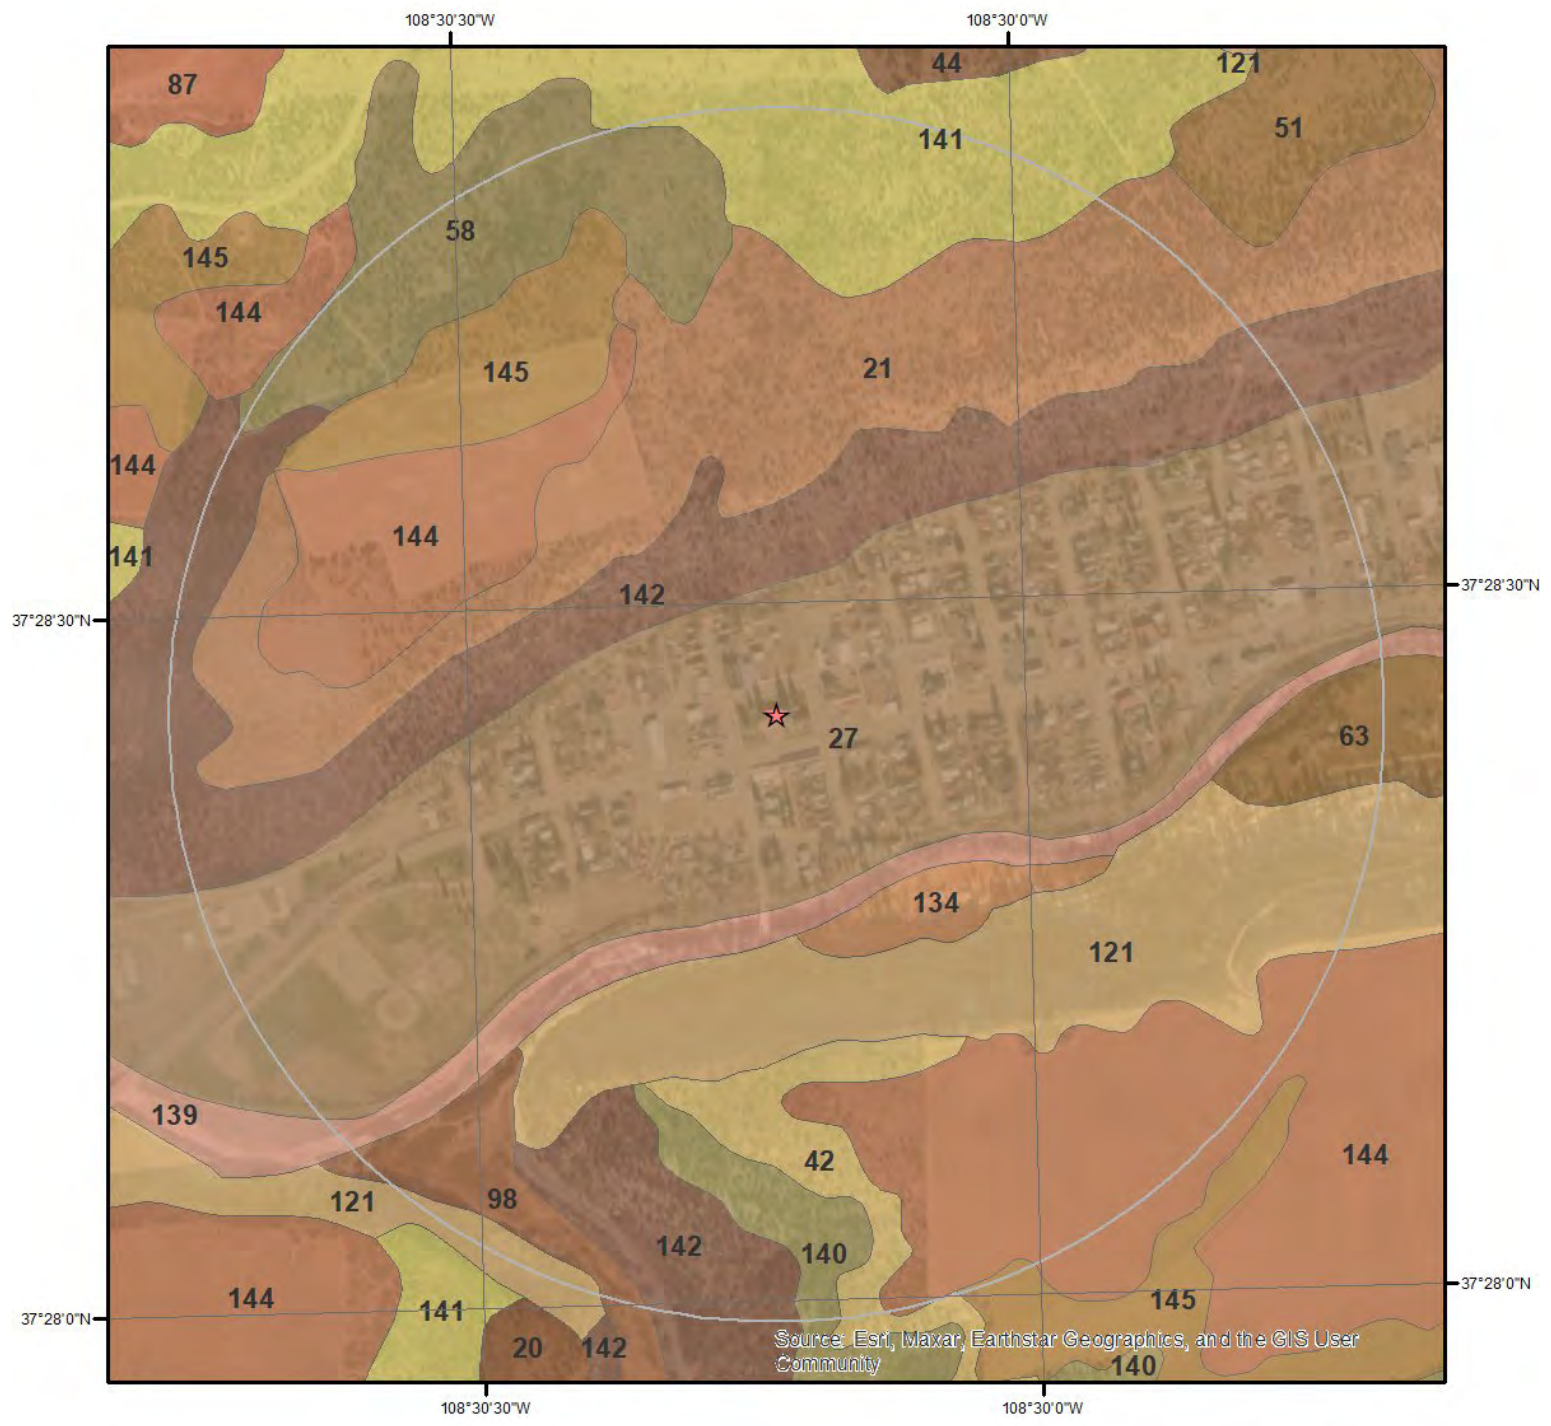

---

### Geologic Unit Jmwe

Unit Name:	Morrison, Wanakah, and Entrada Fms
Unit Age:	Phanerozoic   Mesozoic   Jurassic
Primary Rock Type:	mudstone
Secondary Rock Type:	sandstone
Unit Description:	No description available.

Soil Information

SSURGO Soils

This maps shows SSURGO soil units around the target property. Please refer to the report for detailed soil descriptions.

## Soil Information

The previous page shows a soil map using SSURGO data from USDA Natural Resources Conservation Service. Detailed information about each unit is provided below.

### Map Unit 121 (7.95%)

Map Unit Name:	Sheek-Archuleta-Rock outcrop complex, 25 to 80 percent slopes, north aspect
Bedrock Depth - Min:	0cm
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	C - Soils in this group have moderately high runoff potential when thoroughly wet. Water transmission through the soil is somewhat restricted.

Major components are printed below

#### Sheek(40%)

horizon Oe(0cm to 3cm)	Moderately decomposed plant material
horizon H1(3cm to 13cm)	Very stony sandy loam
horizon H2(13cm to 152cm)	Very stony clay loam

#### Archuleta(25%)

horizon Oi(0cm to 3cm)	Slightly decomposed plant material
horizon H1(3cm to 15cm)	Very stony sandy loam
horizon H2(15cm to 46cm)	Stony clay loam
horizon H3(46cm to 71cm)	Weathered bedrock

#### Rock outcrop(20%)

horizon H1(0cm to 152cm)	Unweathered bedrock
--------------------------	---------------------

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 121 - Sheek-Archuleta-Rock outcrop complex, 25 to 80 percent slopes, north aspect

#### Component: Sheek (40%)

The Sheek component makes up 40 percent of the map unit. Slopes are 25 to 80 percent. This component is on hills, canyons. The parent material consists of colluvium and/or slope alluvium derived from sandstone and shale. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 85 percent. Below this thin organic horizon the organic matter content is about 3 percent. This component is in the R048AY903CO Douglas Fir ecological site. Nonirrigated land capability classification is 7e. This soil does not meet hydric criteria. There are no saline horizons within 30 inches of the soil surface.

#### Component: Archuleta (25%)

The Archuleta component makes up 25 percent of the map unit. Slopes are 25 to 80 percent. This component is on hills, canyons. The parent material consists of slope alluvium over residuum weathered from sandstone and shale. Depth to a root restrictive layer, bedrock, paralithic, is 10 to 20 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is very low. Available water to a depth of 60 inches (or restricted depth) is very low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 85 percent. Below this thin organic horizon the organic matter content is about 2 percent. This component is in the R048AY903CO Douglas Fir ecological site. Nonirrigated land capability classification is 7e. This soil does not meet hydric criteria. There are no saline horizons within 30 inches of the soil surface.

#### Component: Rock outcrop (20%)

Generated brief soil descriptions are created for major soil components. The Rock outcrop is a miscellaneous area.

#### Component: Tragmon (10%)

Generated brief soil descriptions are created for major soil components. The Tragmon soil is a minor component.

#### Component: Hesperus (5%)

Generated brief soil descriptions are created for major soil components. The Hesperus soil is a minor component.

## Soil Information

### Map Unit 134 (0.13%)

Map Unit Name:	Umbarg-Winner-Tesajo complex, 0 to 2 percent slopes, rarely flooded
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	0cm
Drainage Class - Dominant:	Somewhat poorly drained
Hydrologic Group - Dominant:	C - Soils in this group have moderately high runoff potential when thoroughly wet. Water transmission through the soil is somewhat restricted.

Major components are printed below

#### Umbarg(40%)

horizon A1(0cm to 5cm)	Loam
horizon A2(5cm to 30cm)	Clay loam
horizon A3(30cm to 84cm)	Loam
horizon C1(84cm to 107cm)	Loam
horizon C2(107cm to 152cm)	Very gravelly loam

#### Winner(30%)

horizon Azg(0cm to 10cm)	Clay loam
horizon ACzg(10cm to 36cm)	Clay loam
horizon ACz(36cm to 58cm)	Clay loam
horizon AC(58cm to 79cm)	Clay loam
horizon 2C(79cm to 152cm)	Very stony sandy clay loam

#### Tesajo(20%)

horizon A(0cm to 8cm)	Gravelly sandy loam
horizon AC(8cm to 91cm)	Very cobbly loamy sand
horizon ACg(91cm to 152cm)	Extremely cobbly sandy loam

### Component Description:

Minor map unit components are excluded from this report.

Map Unit: 134 - Umbarg-Winner-Tesajo complex, 0 to 2 percent slopes, rarely flooded

#### Component: Umbarg (40%)

The Umbarg component makes up 40 percent of the map unit. Slopes are 0 to 2 percent. This component is on flood-plain steps. The parent material consists of alluvium. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is somewhat poorly drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is low. This soil is rarely flooded. It is not ponded. A seasonal zone of water saturation is at 29 inches during March, April, May, June. Organic matter content in the surface horizon is about 4 percent. This component is in the R036XY038CO Wet Meadow ecological site. Nonirrigated land capability classification is 3w. Irrigated land capability classification is 3w. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 3 percent.

#### Component: Winner (30%)

The Winner component makes up 30 percent of the map unit. Slopes are 0 to 2 percent. This component is on flood-plain steps. The parent material consists of alluvium. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is very poorly drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is rarely flooded. It is not ponded. A seasonal zone of water saturation is at 0 inches during March, April, May, June, July, August, September. Organic matter content in the surface horizon is about 3 percent. This component is in the R036XY038CO Wet Meadow ecological site. Nonirrigated land capability classification is 5w. Irrigated land capability classification is 5w. This soil meets hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 1 percent. The soil has a very slightly saline horizon within 30 inches of the soil surface.

#### Component: Tesajo (20%)

The Tesajo component makes up 20 percent of the map unit. Slopes are 0 to 2 percent. This component is on flood-plain steps. The parent material consists of alluvium. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is moderately well drained. Water movement in the most restrictive layer is high. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is low. This soil is rarely flooded. It is not ponded. A seasonal zone of water saturation is at 36 inches during March, April, May, June. Organic matter content in the surface horizon is about 3 percent. This component is in the R036XY038CO Wet Meadow ecological site. Nonirrigated land capability classification is 7s. Irrigated land capability classification is 7s. This soil does not meet hydric criteria.

## Soil Information

Component: Payter (5%)

Generated brief soil descriptions are created for major soil components. The Payter soil is a minor component.

Component: Pogo (5%)

Generated brief soil descriptions are created for major soil components. The Pogo soil is a minor component.

---

### Map Unit 139 (52.41%)

Map Unit Name: Water

Bedrock Depth - Min: null

Watertable Depth - Annual Min: null

Drainage Class - Dominant: null

Hydrologic Group - Dominant: null

Major components are printed below

Water(100%)

horizon -99(0cm to 152cm) Water

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 139 - Water

Component: Water (100%)

Generated brief soil descriptions are created for major soil components. The Water is a miscellaneous area.

---

### Map Unit 140 (1.83%)

Map Unit Name: Wauquie very stony loam, 6 to 25 percent slopes, very stony

Bedrock Depth - Min: null

Watertable Depth - Annual Min: null

Drainage Class - Dominant: Well drained

Hydrologic Group - Dominant: B - Soils in this group have moderately low runoff potential when thoroughly wet. Water transmission through the soil is unimpeded.

Major components are printed below

Wauquie(85%)

horizon A1(0cm to 5cm) Very stony loam

horizon A2(5cm to 15cm) Very stony loam

horizon Bt(15cm to 56cm) Very cobbly loam

horizon Bk(56cm to 152cm) Very stony loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 140 - Wauquie very stony loam, 6 to 25 percent slopes, very stony

Component: Wauquie (85%)

The Wauquie, Very stony component makes up 85 percent of the map unit. Slopes are 6 to 25 percent. This component is on fan remnants. The parent material consists of slope alluvium and/or colluvium derived from sandstone and shale. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. This component is in the R036XY110CO Shallow Clay Loam - (pinyon-juniper) ecological site. Nonirrigated land capability classification is 7s. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 8 percent.

## Soil Information

### Component: Zigzag (5%)

Generated brief soil descriptions are created for major soil components. The Zigzag soil is a minor component.

### Component: Rock outcrop (5%)

Generated brief soil descriptions are created for major soil components. The Rock outcrop soil is a minor component.

### Component: Wetherill (5%)

Generated brief soil descriptions are created for major soil components. The Wetherill soil is a minor component.

---

### Map Unit 141 (2.73%)

Map Unit Name:	Wauquie, Stony-Dolcan complex, 6 to 25 percent slopes
Bedrock Depth - Min:	28cm
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	B - Soils in this group have moderately low runoff potential when thoroughly wet. Water transmission through the soil is unimpeded.

Major components are printed below

#### Wauquie(45%)

horizon A1(0cm to 5cm)	Stony fine sandy loam
horizon A2(5cm to 15cm)	Very stony loam
horizon Bt(15cm to 56cm)	Very cobbly loam
horizon Bk(56cm to 152cm)	Very stony loam

#### Dolcan(40%)

horizon A(0cm to 5cm)	Extremely cobbly fine sandy loam
horizon C(5cm to 28cm)	Cobbly clay loam
horizon Cr(28cm to 152cm)	Bedrock

### Component Description:

Minor map unit components are excluded from this report.

Map Unit: 141 - Wauquie, Stony-Dolcan complex, 6 to 25 percent slopes

### Component: Wauquie (45%)

The Wauquie, Stony component makes up 45 percent of the map unit. Slopes are 6 to 25 percent. This component is on eroded dip slopes. The parent material consists of colluvium derived from sandstone and shale. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. This component is in the R036XY110CO Shallow Clay Loam - (pinyon-juniper) ecological site. Nonirrigated land capability classification is 7e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 6 percent.

### Component: Dolcan (40%)

The Dolcan component makes up 40 percent of the map unit. Slopes are 6 to 25 percent. This component is on eroded dip slopes. The parent material consists of colluvium over residuum weathered from sandstone and shale. Depth to a root restrictive layer, bedrock, paralithic, is 6 to 20 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is low. Available water to a depth of 60 inches (or restricted depth) is very low. Shrink-swell potential is moderate. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 2 percent. This component is in the R036XY110CO Shallow Clay Loam - (pinyon-juniper) ecological site. Nonirrigated land capability classification is 7s. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 3 percent.

### Component: Wetherill (5%)

Generated brief soil descriptions are created for major soil components. The Wetherill soil is a minor component.

### Component: Rock outcrop (5%)

Generated brief soil descriptions are created for major soil components. The Rock outcrop soil is a minor component.

### Component: Gladel (5%)

Generated brief soil descriptions are created for major soil components. The Gladel soil is a minor component.

## Soil Information

### Map Unit 142 (16.17%)

Map Unit Name:	Wauquie-Dolcan-Rock outcrop complex, 25 to 80 percent slopes
Bedrock Depth - Min:	28cm
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	B - Soils in this group have moderately low runoff potential when thoroughly wet. Water transmission through the soil is unimpeded.

Major components are printed below

#### Wauquie(40%)

horizon A1(0cm to 5cm)	Very stony loam
horizon A2(5cm to 15cm)	Very stony loam
horizon Bt(15cm to 56cm)	Very cobbly loam
horizon Bk(56cm to 152cm)	Very stony loam

#### Dolcan(30%)

horizon A(0cm to 5cm)	Extremely cobbly fine sandy loam
horizon C(5cm to 28cm)	Cobbly clay loam
horizon Cr(28cm to 150cm)	Bedrock

#### Component Description:

Minor map unit components are excluded from this report.

Map Unit: 142 - Wauquie-Dolcan-Rock outcrop complex, 25 to 80 percent slopes

#### Component: Wauquie (40%)

The Wauquie, Stony component makes up 40 percent of the map unit. Slopes are 25 to 60 percent. This component is on canyons. The parent material consists of colluvium derived from sandstone and shale. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. This component is in the R036XY111CO Steep Shallow Clay Loam - (pinyon-juniper) ecological site. Nonirrigated land capability classification is 7s. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 8 percent.

#### Component: Dolcan (30%)

The Dolcan component makes up 30 percent of the map unit. Slopes are 25 to 80 percent. This component is on canyons. The parent material consists of colluvium over residuum weathered from sandstone and shale. Depth to a root restrictive layer, bedrock, paralithic, is 10 to 20 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is low. Available water to a depth of 60 inches (or restricted depth) is very low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 2 percent. This component is in the R036XY111CO Steep Shallow Clay Loam - (pinyon-juniper) ecological site. Nonirrigated land capability classification is 6s. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 3 percent.

#### Component: Rock outcrop (20%)

Generated brief soil descriptions are created for major soil components. The Rock outcrop is a miscellaneous area.

#### Component: Gladel (5%)

Generated brief soil descriptions are created for major soil components. The Gladel soil is a minor component.

#### Component: Wetherill (5%)

Generated brief soil descriptions are created for major soil components. The Wetherill soil is a minor component.

### Map Unit 144 (2.29%)

Map Unit Name:	Wetherill loam, 3 to 6 percent slopes
Bedrock Depth - Min:	null

## Soil Information

Watertable Depth - Annual Min: null  
Drainage Class - Dominant: Well drained  
Hydrologic Group - Dominant: B - Soils in this group have moderately low runoff potential when thoroughly wet. Water transmission through the soil is unimpeded.

Major components are printed below

Wetherill(85%)

horizon A(0cm to 8cm)	Loam
horizon Bt(8cm to 18cm)	Loam
horizon Btk1(18cm to 122cm)	Loam
horizon Btk2(122cm to 152cm)	Loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 144 - Wetherill loam, 3 to 6 percent slopes

Component: Wetherill (85%)

The Wetherill component makes up 85 percent of the map unit. Slopes are 3 to 6 percent. This component is on dissected dip slopes on cuestas. The parent material consists of eolian deposits derived from sandstone. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is moderate. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. This component is in the R036XY284CO Loamy Foothills ecological site. Nonirrigated land capability classification is 4e. Irrigated land capability classification is 3e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 8 percent.

Component: Pulpit (5%)

Generated brief soil descriptions are created for major soil components. The Pulpit soil is a minor component.

### Map Unit 145 (0.98%)

Map Unit Name: Wetherill loam, 6 to 12 percent slopes  
Bedrock Depth - Min: null  
Watertable Depth - Annual Min: null  
Drainage Class - Dominant: Well drained  
Hydrologic Group - Dominant: C - Soils in this group have moderately high runoff potential when thoroughly wet. Water transmission through the soil is somewhat restricted.

Major components are printed below

Wetherill(80%)

horizon H1(0cm to 8cm)	Loam
horizon H2(8cm to 18cm)	Loam
horizon H3(18cm to 122cm)	Clay loam
horizon H4(122cm to 152cm)	Loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 145 - Wetherill loam, 6 to 12 percent slopes

## Soil Information

### Component: Wetherill (80%)

The Wetherill component makes up 80 percent of the map unit. Slopes are 6 to 12 percent. The parent material consists of eolian deposits derived from sandstone. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is moderate. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. This component is in the R036XY284CO Loamy Foothills ecological site. Nonirrigated land capability classification is 4e. Irrigated land capability classification is 4e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 5 percent.

### Component: Sharps (10%)

Generated brief soil descriptions are created for major soil components. The Sharps soil is a minor component.

### Component: Pulpit (5%)

Generated brief soil descriptions are created for major soil components. The Pulpit soil is a minor component.

### Component: Ackmen (4%)

Generated brief soil descriptions are created for major soil components. The Ackmen soil is a minor component.

### Component: Aquents (1%)

Generated brief soil descriptions are created for major soil components. The Aquents soil is a minor component.

---

### Map Unit 21 (1.94%)

Map Unit Name:	Cahona-Sharps-Wetherill complex, 2 to 6 percent slopes
Bedrock Depth - Min:	76cm
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	C - Soils in this group have moderately high runoff potential when thoroughly wet. Water transmission through the soil is somewhat restricted.

Major components are printed below

#### Cahona(35%)

horizon H1(0cm to 13cm)	Loam
horizon H2(13cm to 64cm)	Clay loam
horizon H3(64cm to 152cm)	Loam

#### Sharps(30%)

horizon H1(0cm to 23cm)	Loam
horizon H2(23cm to 48cm)	Clay loam
horizon H3(48cm to 76cm)	Loam
horizon H4(76cm to 102cm)	Weathered bedrock

#### Wetherill(20%)

horizon H1(0cm to 8cm)	Loam
horizon H2(8cm to 18cm)	Loam
horizon H3(18cm to 122cm)	Loam
horizon H4(122cm to 152cm)	Loam

### Component Description:

Minor map unit components are excluded from this report.

Map Unit: 21 - Cahona-Sharps-Wetherill complex, 2 to 6 percent slopes

### Component: Cahona (35%)

The Cahona component makes up 35 percent of the map unit. Slopes are 2 to 6 percent. This component is on hills, mesas. The parent material consists of eolian deposits derived from sandstone. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. This component is in the R036XY284CO Loamy Foothills ecological site. Nonirrigated land capability classification is 3e. Irrigated land capability classification is 3e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 33 percent. There are no saline horizons within 30 inches of the soil surface. The soil has a maximum sodium adsorption ratio of 2 within 30

## Soil Information

inches of the soil surface.

### Component: Sharps (30%)

The Sharps component makes up 30 percent of the map unit. Slopes are 2 to 6 percent. This component is on mesas, hills. The parent material consists of eolian deposits derived from sandstone. Depth to a root restrictive layer, bedrock, paralithic, is 20 to 40 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is very low. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. This component is in the R036XY284CO Loamy Foothills ecological site. Nonirrigated land capability classification is 3e. Irrigated land capability classification is 3e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 12 percent. There are no saline horizons within 30 inches of the soil surface.

### Component: Wetherill (20%)

The Wetherill component makes up 20 percent of the map unit. Slopes are 2 to 6 percent. This component is on mesas, hills. The parent material consists of eolian deposits derived from sandstone. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is moderate. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. This component is in the R036XY284CO Loamy Foothills ecological site. Nonirrigated land capability classification is 3e. Irrigated land capability classification is 3e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 5 percent.

### Component: Pulpit (5%)

Generated brief soil descriptions are created for major soil components. The Pulpit soil is a minor component.

### Map Unit 27 (10.21%)

Map Unit Name:	Dalmatian-Apmay-Schrader complex, 0 to 5 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	46cm
Drainage Class - Dominant:	Somewhat poorly drained
Hydrologic Group - Dominant:	C - Soils in this group have moderately high runoff potential when thoroughly wet. Water transmission through the soil is somewhat restricted.

Major components are printed below

#### Apmay(40%)

horizon H1(0cm to 10cm)	Loam
horizon H2(10cm to 46cm)	Clay loam
horizon H3(46cm to 56cm)	Sandy loam
horizon H4(56cm to 152cm)	Very gravelly sandy loam

#### Dalmatian(35%)

horizon H1(0cm to 99cm)	Loam
horizon H2(99cm to 124cm)	Sandy clay loam
horizon H3(124cm to 152cm)	Gravelly sandy loam

#### Schrader(15%)

horizon H1(0cm to 33cm)	Loam
horizon H2(33cm to 43cm)	Fine sandy loam
horizon H3(43cm to 61cm)	Sandy clay loam
horizon H4(61cm to 152cm)	Fine sandy loam

Component Description:

## Soil Information

Minor map unit components are excluded from this report.

Map Unit: 27 - Dalmatian-Apmay-Schrader complex, 0 to 5 percent slopes

### Component: Apmay (40%)

The Apmay component makes up 35 percent of the map unit. Slopes are 0 to 5 percent. The parent material consists of alluvium derived from mixed. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is somewhat poorly drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is rarely flooded. It is not ponded. A seasonal zone of water saturation is at 24 inches during May, June. Organic matter content in the surface horizon is about 3 percent. Nonirrigated land capability classification is 4c. Irrigated land capability classification is 4c. This soil does not meet hydric criteria.

### Component: Dalmatian (35%)

The Dalmatian component makes up 35 percent of the map unit. Slopes are 0 to 5 percent. The parent material consists of alluvium derived from mixed. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is moderately well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is low. This soil is rarely flooded. It is not ponded. A seasonal zone of water saturation is at 48 inches during April, May, June, July. Organic matter content in the surface horizon is about 3 percent. Nonirrigated land capability classification is 4c. Irrigated land capability classification is 4c. This soil does not meet hydric criteria.

### Component: Schrader (15%)

The Schrader component makes up 15 percent of the map unit. Slopes are 0 to 5 percent. This component is on flood plains. The parent material consists of alluvium derived from mixed. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is poorly drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is occasionally flooded. It is not ponded. A seasonal zone of water saturation is at 18 inches during May, June. Organic matter content in the surface horizon is about 3 percent. Nonirrigated land capability classification is 4w. Irrigated land capability classification is 4w. This soil meets hydric criteria.

### Component: Ustifluent (5%)

Generated brief soil descriptions are created for major soil components. The Ustifluent soil is a minor component.

### Component: Riverwash (5%)

Generated brief soil descriptions are created for major soil components. The Riverwash soil is a minor component.

---

## Map Unit 42 (0.31%)

Map Unit Name:	Gladel-Pulpit complex, 3 to 9 percent slopes
Bedrock Depth - Min:	46cm
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	D - Soils in this group have high runoff potential when thoroughly wet. Water movement through the soil is restricted or very restricted.

Major components are printed below

### Gladel(45%)

horizon A(0cm to 8cm)	Fine sandy loam
horizon Bw(8cm to 28cm)	Sandy loam
horizon Bk(28cm to 46cm)	Sandy loam
horizon R(46cm to 150cm)	Bedrock

### Pulpit(35%)

horizon A(0cm to 8cm)	Silt loam
horizon Bt(8cm to 25cm)	Silt loam
horizon Bk(25cm to 61cm)	Silt loam
horizon 2R(61cm to 150cm)	Bedrock

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 42 - Gladel-Pulpit complex, 3 to 9 percent slopes

## Soil Information

### Component: Gladel (45%)

The Gladel component makes up 45 percent of the map unit. Slopes are 3 to 9 percent. This component is on dissected dip slopes on cuestas. The parent material consists of eolian deposits over residuum weathered from sandstone. Depth to a root restrictive layer, bedrock, lithic, is 12 to 20 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is low. Available water to a depth of 60 inches (or restricted depth) is very low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 2 percent. This component is in the R036XY141CO Shallow Loamy Mesa Top - (pinyon-juniper) ecological site. Nonirrigated land capability classification is 7s. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 9 percent. There are no saline horizons within 30 inches of the soil surface.

### Component: Pulpit (35%)

The Pulpit component makes up 35 percent of the map unit. Slopes are 3 to 9 percent. This component is on dissected dip slopes on cuestas. The parent material consists of eolian deposits over residuum weathered from sandstone. Depth to a root restrictive layer, bedrock, lithic, is 20 to 40 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is low. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. This component is in the R036XY142CO Loamy Mesa Top - (pinyon-juniper) ecological site. Nonirrigated land capability classification is 4e. Irrigated land capability classification is 4e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 8 percent. There are no saline horizons within 30 inches of the soil surface.

### Component: Rock outcrop (10%)

Generated brief soil descriptions are created for major soil components. The Rock outcrop soil is a minor component.

### Component: Wetherill (5%)

Generated brief soil descriptions are created for major soil components. The Wetherill soil is a minor component.

### Component: Dolcan (5%)

Generated brief soil descriptions are created for major soil components. The Dolcan soil is a minor component.

---

## Map Unit 58 (0.72%)

Map Unit Name:	Ilex-Granath complex, 2 to 6 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	C - Soils in this group have moderately high runoff potential when thoroughly wet. Water transmission through the soil is somewhat restricted.

Major components are printed below

#### Ilex(60%)

horizon H1(0cm to 5cm)	Loam
horizon H2(5cm to 56cm)	Clay loam
horizon H3(56cm to 94cm)	Clay
horizon H4(94cm to 152cm)	Clay

#### Granath(25%)

horizon Oi(0cm to 3cm)	Slightly decomposed plant material
horizon H1(3cm to 36cm)	Loam
horizon H2(36cm to 152cm)	Clay loam

### Component Description:

Minor map unit components are excluded from this report.

Map Unit: 58 - Ilex-Granath complex, 2 to 6 percent slopes

### Component: Ilex (60%)

The Ilex component makes up 60 percent of the map unit. Slopes are 2 to 6 percent. The parent material consists of eolian deposits derived from sandstone and shale and/or residuum weathered from sandstone and shale. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately low. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is high. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 2 percent. This component is in the R048AY234CO Mountain Clay ecological site. Nonirrigated land capability classification is 4c. Irrigated land

## Soil Information

capability classification is 4c. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 20 percent.

### Component: Granath (25%)

The Granath component makes up 25 percent of the map unit. Slopes are 2 to 6 percent. The parent material consists of eolian deposits derived from sandstone. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is moderate. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 85 percent. Below this thin organic horizon the organic matter content is about 3 percent. This component is in the R048AY228CO Mountain Loam ecological site. Nonirrigated land capability classification is 4c. Irrigated land capability classification is 4c. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 3 percent. There are no saline horizons within 30 inches of the soil surface.

### Component: Pramiss (5%)

Generated brief soil descriptions are created for major soil components. The Pramiss soil is a minor component.

### Component: Nortez (5%)

Generated brief soil descriptions are created for major soil components. The Nortez soil is a minor component.

### Component: Fughes (5%)

Generated brief soil descriptions are created for major soil components. The Fughes soil is a minor component.

---

### Map Unit 63 (0.43%)

Map Unit Name:	Jemco-Detra-Beje complex, 1 to 15 percent slopes
Bedrock Depth - Min:	36cm
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	C - Soils in this group have moderately high runoff potential when thoroughly wet. Water transmission through the soil is somewhat restricted.

Major components are printed below

#### Jemco(40%)

horizon A1(0cm to 5cm)	Silt loam
horizon A2(5cm to 18cm)	Silt loam
horizon BE(18cm to 36cm)	Loam
horizon Bt1(36cm to 56cm)	Loam
horizon Bt2(56cm to 89cm)	Clay loam
horizon 2Bt(89cm to 99cm)	Clay loam
horizon 2R(99cm to 150cm)	Bedrock

#### Detra(30%)

horizon A(0cm to 41cm)	Loam
horizon BA(41cm to 76cm)	Loam
horizon Bt1(76cm to 109cm)	Clay loam
horizon Bt2(109cm to 130cm)	Clay loam
horizon 2BC(130cm to 145cm)	Sandy clay loam
horizon 2R(145cm to 155cm)	Bedrock

#### Beje(20%)

horizon A(0cm to 5cm)	Loam
horizon AB(5cm to 15cm)	Loam
horizon Bt(15cm to 36cm)	Clay loam
horizon R(36cm to 150cm)	Bedrock

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 63 - Jemco-Detra-Beje complex, 1 to 15 percent slopes

Component: Jemco (40%)

## Soil Information

The Jemco component makes up 40 percent of the map unit. Slopes are 1 to 15 percent. This component is on dissected dip slopes. The parent material consists of eolian deposits and/or slope alluvium over residuum weathered from sandstone. Depth to a root restrictive layer, bedrock, lithic, is 20 to 40 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is low. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is moderate. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 2 percent. Nonirrigated land capability classification is 4e. Irrigated land capability classification is 4e. This soil does not meet hydric criteria. There are no saline horizons within 30 inches of the soil surface.

### Component: Detra (30%)

The Detra component makes up 30 percent of the map unit. Slopes are 1 to 15 percent. This component is on dissected dip slopes. The parent material consists of eolian deposits and/or slope alluvium over residuum weathered from sandstone and shale. Depth to a root restrictive layer, bedrock, lithic, is 40 to 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is low. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is moderate. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 4 percent. Nonirrigated land capability classification is 4e. Irrigated land capability classification is 4e. This soil does not meet hydric criteria. There are no saline horizons within 30 inches of the soil surface.

### Component: Beje (20%)

The Beje component makes up 20 percent of the map unit. Slopes are 1 to 15 percent. This component is on dissected dip slopes. The parent material consists of slope alluvium over residuum weathered from sandstone. Depth to a root restrictive layer, bedrock, lithic, is 10 to 20 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is low. Available water to a depth of 60 inches (or restricted depth) is very low. Shrink-swell potential is moderate. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 4 percent. Nonirrigated land capability classification is 7s. Irrigated land capability classification is 7s. This soil does not meet hydric criteria. There are no saline horizons within 30 inches of the soil surface.

### Component: Herm (5%)

Generated brief soil descriptions are created for major soil components. The Herm soil is a minor component.

### Component: Fughes (5%)

Generated brief soil descriptions are created for major soil components. The Fughes soil is a minor component.

---

## Map Unit 98 (1.92%)

Map Unit Name:	Ramper loam, 0 to 3 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	C - Soils in this group have moderately high runoff potential when thoroughly wet. Water transmission through the soil is somewhat restricted.

Major components are printed below

### Ramper(90%)

horizon H1(0cm to 8cm)	Loam
horizon H2(8cm to 152cm)	Stratified sandy loam to clay loam

### Component Description:

Minor map unit components are excluded from this report.

Map Unit: 98 - Ramper loam, 0 to 3 percent slopes

### Component: Ramper (90%)

The Ramper component makes up 90 percent of the map unit. Slopes are 0 to 3 percent. This component is on flood plains, alluvial fans, drainageways. The parent material consists of alluvium derived from sandstone and shale. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is low. This soil is rarely flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. This component is in the R036XY405CO Loamy Bottom (ghost) ecological site. Nonirrigated land capability classification is 3c. Irrigated land capability classification is 3c. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 8 percent. The soil has a slightly saline horizon within 30 inches of the soil surface.

### Component: Ackmen (5%)

## Soil Information

Generated brief soil descriptions are created for major soil components. The Ackmen soil is a minor component.

Component: Sideshow (4%)

Generated brief soil descriptions are created for major soil components. The Sideshow soil is a minor component.

Component: Aquents (1%)

Generated brief soil descriptions are created for major soil components. The Aquents soil is a minor component.

# Radon Information

This section lists any relevant radon information found for the target property.

Federal EPA Radon Zone for MONTEZUMA County: 1

- Zone 1: Counties with predicted average indoor radon screening levels greater than 4 pCi/L
- Zone 2: Counties with predicted average indoor radon screening levels from 2 to 4 pCi/L
- Zone 3: Counties with predicted average indoor radon screening levels less than 2 pCi/L

Federal Area Radon Information for MONTEZUMA County

No Measures/Homes:	17
Geometric Mean:	1.7
Arithmetic Mean:	2.6
Median:	1.5
Standard Deviation:	3.2
Maximum:	13.4
% >4 pCi/L:	12
% >20 pCi/L:	0
Notes on Data Table:	TABLE 1. Screening indoor radon data from the EPA/State Residential Radon Survey of Colorado conducted during 1986-87. Data represent 2-7 day charcoal canister measurements from the lowest level of each home tested.

## Federal Sources

### FEMA National Flood Hazard Layer

FEMA FLOOD

The National Flood Hazard Layer (NFHL) data incorporates Flood Insurance Rate Map (FIRM) databases published by the Federal Emergency Management Agency (FEMA), and any Letters Of Map Revision (LOMRs) that have been issued against those databases since their publication date. The FIRM Database is the digital, geospatial version of the flood hazard information shown on the published paper FIRMs. The FIRM Database depicts flood risk information and supporting data used to develop the risk data. The FIRM Database is derived from Flood Insurance Studies (FISs), previously published FIRMs, flood hazard analyses performed in support of the FISs and FIRMs, and new mapping data, where available.

### Indoor Radon Data

INDOOR RADON

Indoor radon measurements tracked by the Environmental Protection Agency(EPA) and the State Residential Radon Survey.

### Public Water Systems Violations and Enforcement Data

PWSV

List of drinking water violations and enforcement actions from the Safe Drinking Water Information System (SDWIS) made available by the Drinking Water Protection Division of the US EPA's Office of Groundwater and Drinking Water. Enforcement sensitive actions are not included in the data released by the EPA. Address information provided in SWDIS may correspond either with the physical location of the water system, or with a contact address.

### Radon Zone Level

RADON ZONE

Areas showing the level of Radon Zones (level 1, 2 or 3) by county. This data is maintained by the Environmental Protection Agency (EPA).

### Safe Drinking Water Information System (SDWIS)

SDWIS

The Safe Drinking Water Information System (SDWIS) contains information about public water systems as reported to US Environmental Protection Agency (EPA) by the states. Addresses may correspond with the location of the water system, or with a contact address.

### Soil Survey Geographic database

SSURGO

The Soil Survey Geographic database (SSURGO) contains information about soil as collected by the National Cooperative Soil Survey at the Natural Resources Conservation Service (NRCS). Soil maps outline areas called map units. The map units are linked to soil properties in a database. Each map unit may contain one to three major components and some minor components.

### USGS Current Topo

US TOPO

US Topo topographic maps are produced by the National Geospatial Program of the U.S. Geological Survey (USGS). The project was launched in late 2009, and the term "US Topo" refers specifically to quadrangle topographic maps published in 2009 and later.

### USGS Geology

US GEOLOGY

Seamless maps depicting geological information provided by the United States Geological Survey (USGS).

### USGS National Water Information System

FED USGS

The U.S. Geological Survey (USGS)'s National Water Information System (NWIS) is the nation's principal repository of water resources data. This database includes comprehensive information of well-construction details, time-series data for gage height, streamflow, groundwater level, and precipitation and water use data.

### Wells from NWIS

FED USGS

The U.S. Geological Survey's National Water Information System (NWIS) is the nation's principal repository of water resources data. The NWIS includes comprehensive information of well-construction details, time-series data for gage height, streamflow, groundwater level, and precipitation and water use data. This NWIW dataset contains select Site Types from the overall NWIS Sites data, limited to the following Group Site Types only: Groundwater Group Site Types: Well, Collector or Ranney type well, Hyporheic-zone well, Interconnected Wells, Multiple wells; Spring Group Site Type: Spring; and Other Group Site Types: Aggregate groundwater use, Cistern.

## Appendix

### State Sources

#### Oil and Gas Pit Locations

PITS

The Colorado Oil and Gas Conservation Commission (COGCC) maintains this list of oil and gas pit locations within Colorado. This data contains over 10,000 oil and gas related pit locations. The Colorado Department of Natural Resources (DNR) notes that data and information provided by the DNR is provided as is without warranty of any kind, and that DNR is not responsible and shall not be liable for damages of any kind arising out of the use of data or information provided herein.

#### Oil and Gas Wells

OGW

A list of active and plugged wells - including active and expired well permits provided by Department of Natural Resources, Oil & Gas Conservation Commission.

#### Public Water Wells

WATER WELLS

The statewide water wells data consists of water levels information for each well. The data was made available by Colorado Decision Supports System under the development and improvement by the Colorado Water Conservation Board (CWCB) and the Colorado Division of Water Resources (DWR). The well latitude and longitude information represents physical location of the wells.

#### Water Wells Permit Database

WATER WELLS

Water wells application and permit database maintained by the Colorado Department of Natural Resources' Division of Water Resources. This database includes statewide well applications and permits issued by the department.

## Liability Notice

**Reliance on information in Report:** The Physical Setting Report (PSR) DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as a review of environmental databases and physical characteristics for the site or adjacent properties.

**License for use of information in Report:** No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

**Your Liability for misuse:** Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

**No warranty of Accuracy or Liability for ERIS:** The information contained in this report has been produced by ERIS Information Inc. ("ERIS") using various sources of information, including information provided by Federal and State government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS Information Inc. disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

**Trademark and Copyright:** You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report(s) are protected by copyright owned by ERIS Information Inc. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

RE: CITY DIRECTORY RESEARCH  
420 Central Avenue  
Dolores, CO 81323

Thank you for contacting ERIS for an City Directory Search for the site described above. Our staff has conducted a reverse listing City Directory search to determine prior occupants of the subject site and adjacent properties. We have provided the nearest addresses(s) when adjacent addresses are not listed. If we have searched a range of addresses, all addresses in that range found in the Directory are included.

Note: Reverse Listing Directories generally are focused on more highly developed areas. Newly developed areas may be covered in the more recent years, but the older directories will tend to cover only the "central" parts of the city. To complete the search, we have either utilized the ACPL, Library of Congress, State Archives, and/or a regional library or history center as well as multiple digitized directories. These do not claim to be a complete collection of all reverse listing city directories produced.

ERIS has made every effort to provide accurate and complete information but shall not be held liable for missing, incomplete or inaccurate information. To complete this search we used the general range(s) below to search for relevant findings. If you believe there are additional addresses or streets that require searching please contact us at 866-517-5204.

**Search Criteria:**

300-600 of Central Ave  
300-600 of Railroad Ave

**Search Notes:**

## Charlie Jensen, PG, CPG

### Hydrogeologist/Project Manager

Charlie joined Ayres in 2021 with a plethora of environmental experience, ranging from in-situ soil and groundwater remediation to Phase 1 and 2 site assessment and spill prevention, control, and countermeasures. He also has been a site manager for numerous complex projects across the Front Range.

Charlie's most recent work supported environmental compliance and technical services, including aquifer characterization tasks. He is very familiar with state and municipal interests.

As a hydrogeologist, Charlie's responsibilities include project management relating to environmental remediation, assessment, redevelopment, oil/gas/mining operations, and regulatory compliance. He conducts environmental site assessments and remedial investigations and functions as a technical advisor on the collection and interpretation of field data.

Charlie is known for building relationships with regulatory agencies to achieve desired outcomes. He has significant experience working within Wyoming Department of Environmental Quality (WDEQ) and Colorado Department of Public Health and Environment (CDPHE) regulations. He has worked on environmental and drinking water protection programs on some of the most complex projects in Wyoming and Colorado.

Due diligence (acquisition and divestiture) Phase 1 ESA projects Charlie completed previous to his Ayres employment include:

- Oil and gas divestitures in several US basins covering seven states, with over 3,500 well pad locations inspected
- Industrial clients such as utility companies, bulk terminals, and manufacturing
- EPA and state brownfields
- Asset Retirement Obligation (ARO) evaluations and remedial cost estimation

Charlie's Phase 1 and 2 ESA work with Ayres includes projects for these clients:

- Renewable World Energies, IA and MI
- City of Montrose, CO
- City of Craig, CO
- Hinsdale County, CO
- Invenergy, LLC, CO
- Altamont Energy

#### Total Experience

32 Years

#### Registrations

Professional Geologist, AK, 2000; LA, 2014; TX, 2003; UT, 2015; NE, 2000; WY, 1997

#### Education

BS, Geology, Texan Christian University, Fort Worth, TX

#### Memberships

American Institute of Professional Geologists
